

User Flow Diagrams

15 diagrams — 10 core flows, 4 proposed cancellation/rebooking flows, 1 system overview map ·
Prepared 2026-07-09, regenerated 2026-07-10

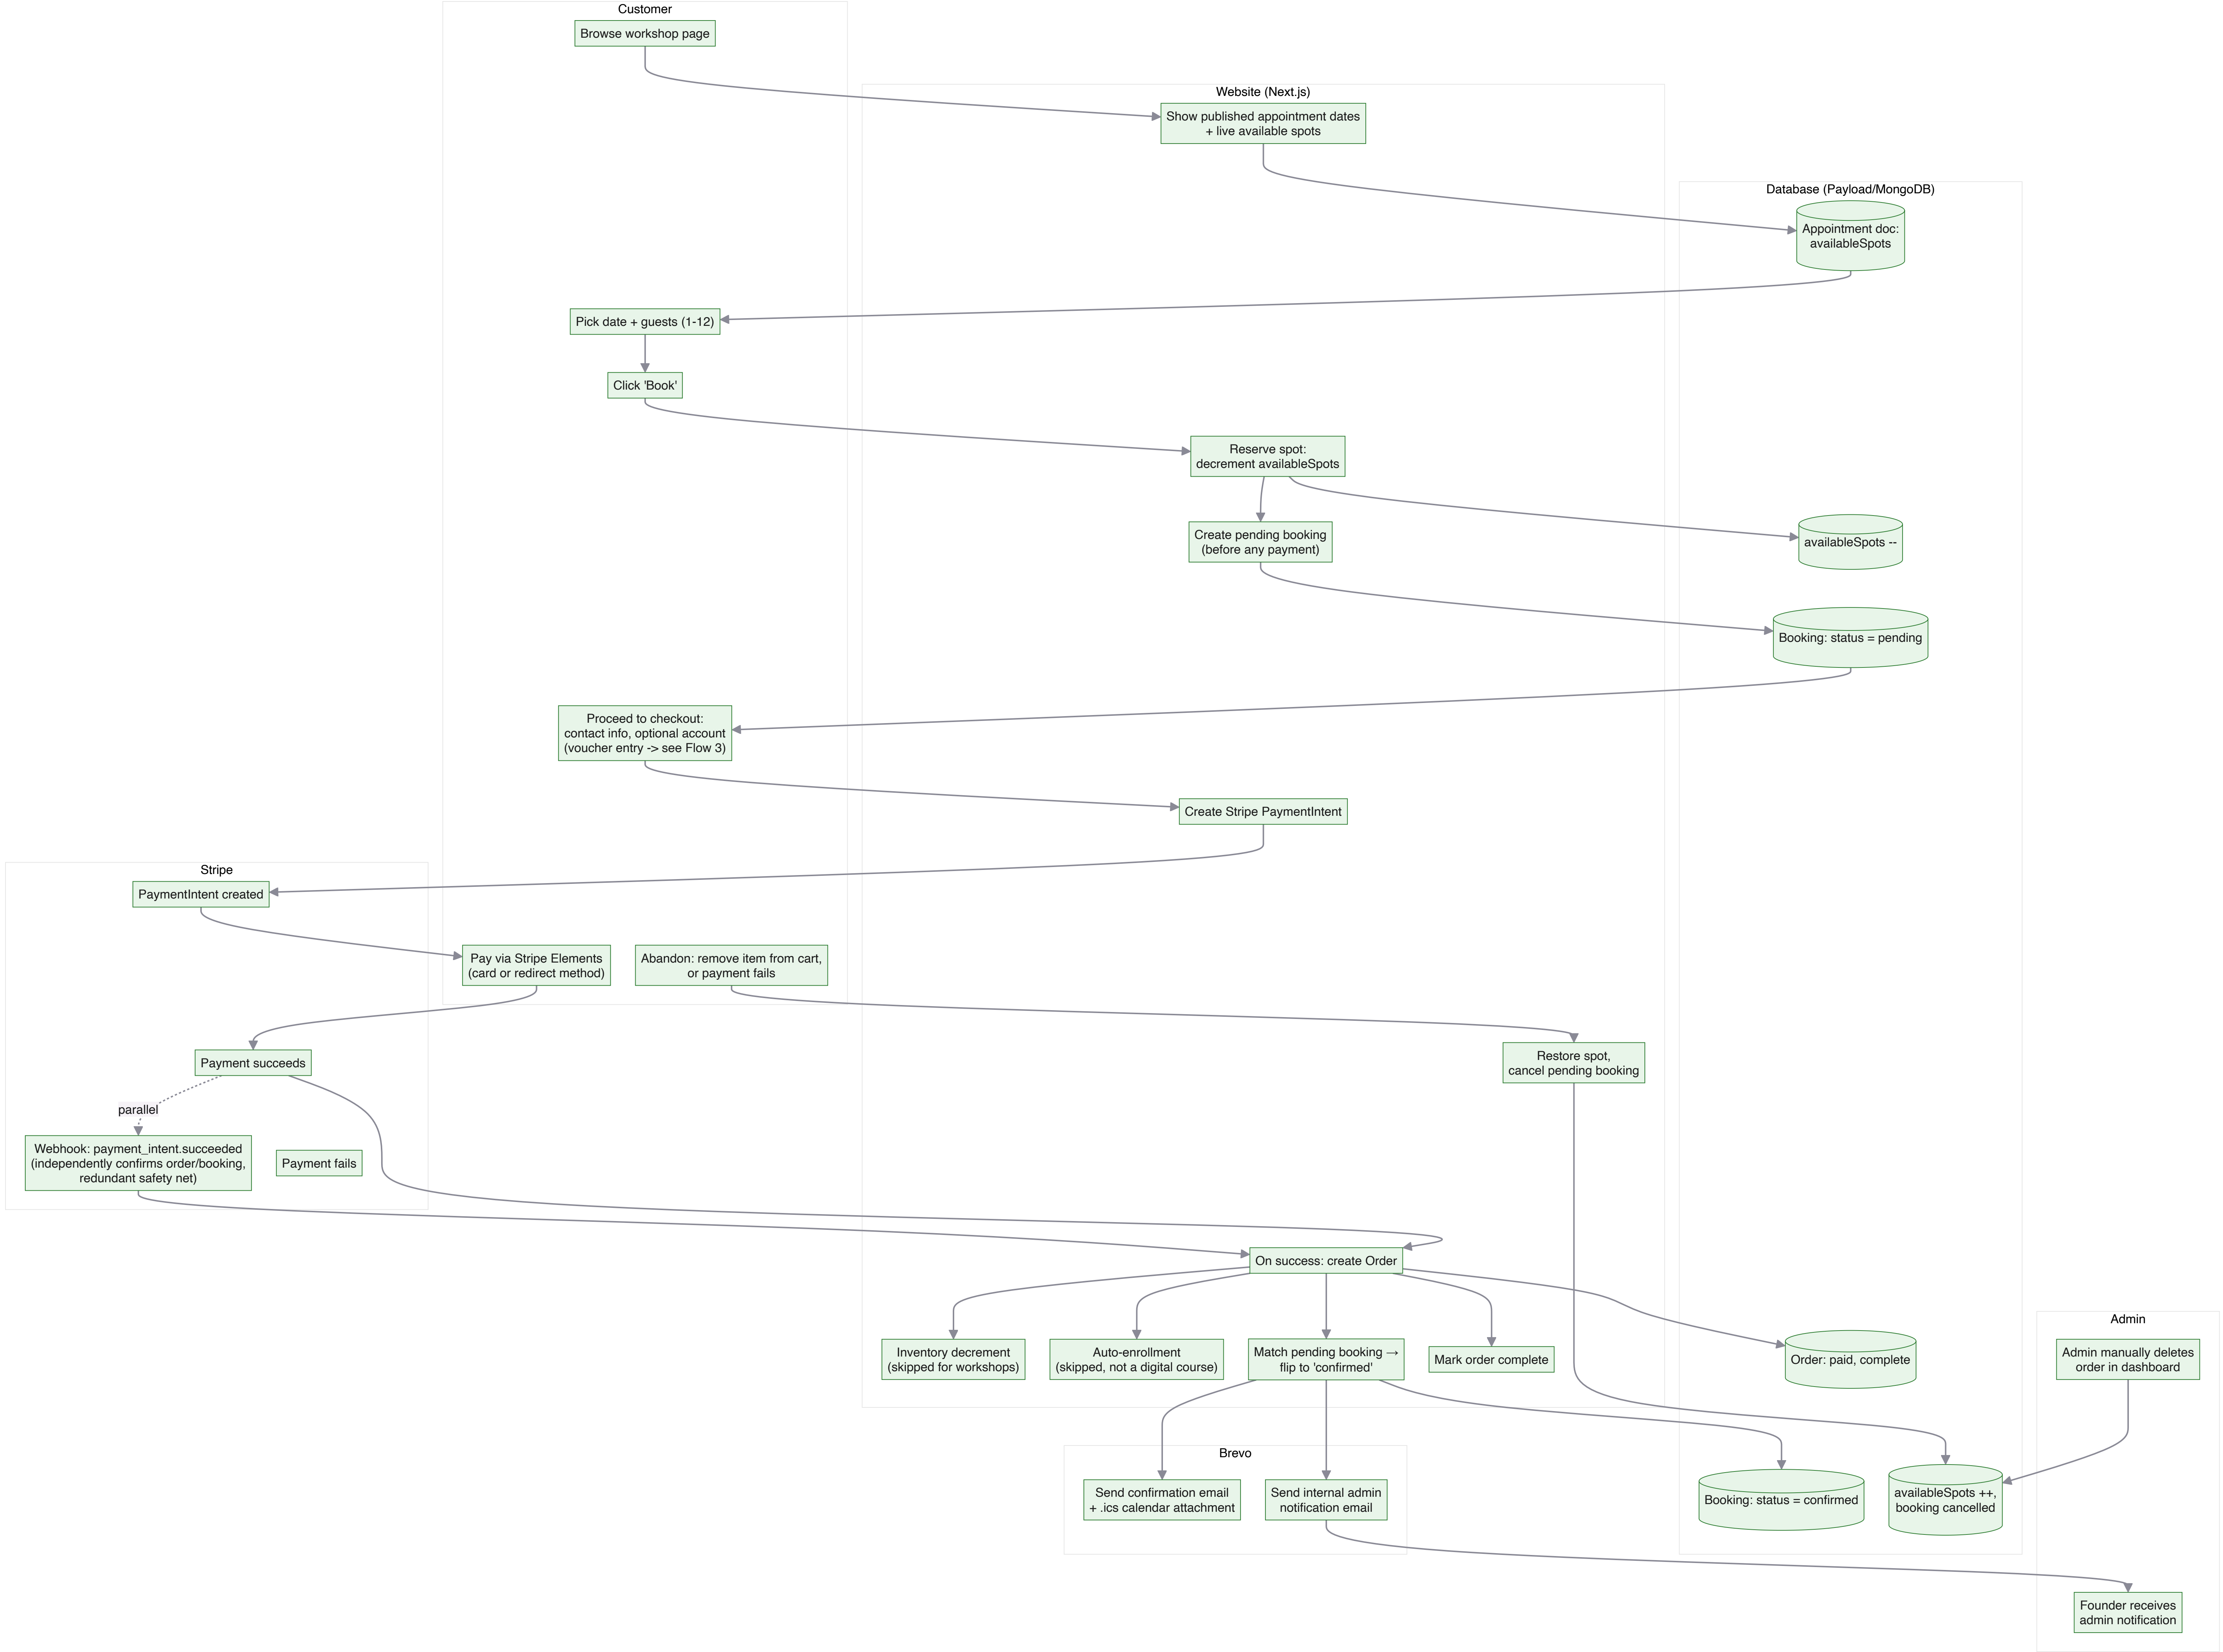

CONTENTS

1. Flow 1 — Workshop booking & checkout (core commerce flow)
2. Flow 2 — Gift voucher purchase
3. Flow 3 — Redeeming a voucher at checkout
4. Flow 4 — PDF voucher download
5. Flow 5 — Account creation, login, password reset
6. Flow 6 — Newsletter signup
7. Flow 7 — Digital course purchase & enrollment
8. Flow 8 — Admin: publishing a new workshop
9. Flow 9 — Editing website content (bilingual)
10. Flow 10 — Stripe webhook reconciliation
11. Flow 11a-d — Cancelling / rebooking a workshop 🚧 proposed design (David's Cases 1-4)
12. Map of maps — all 11 flows, overall health

LEGEND

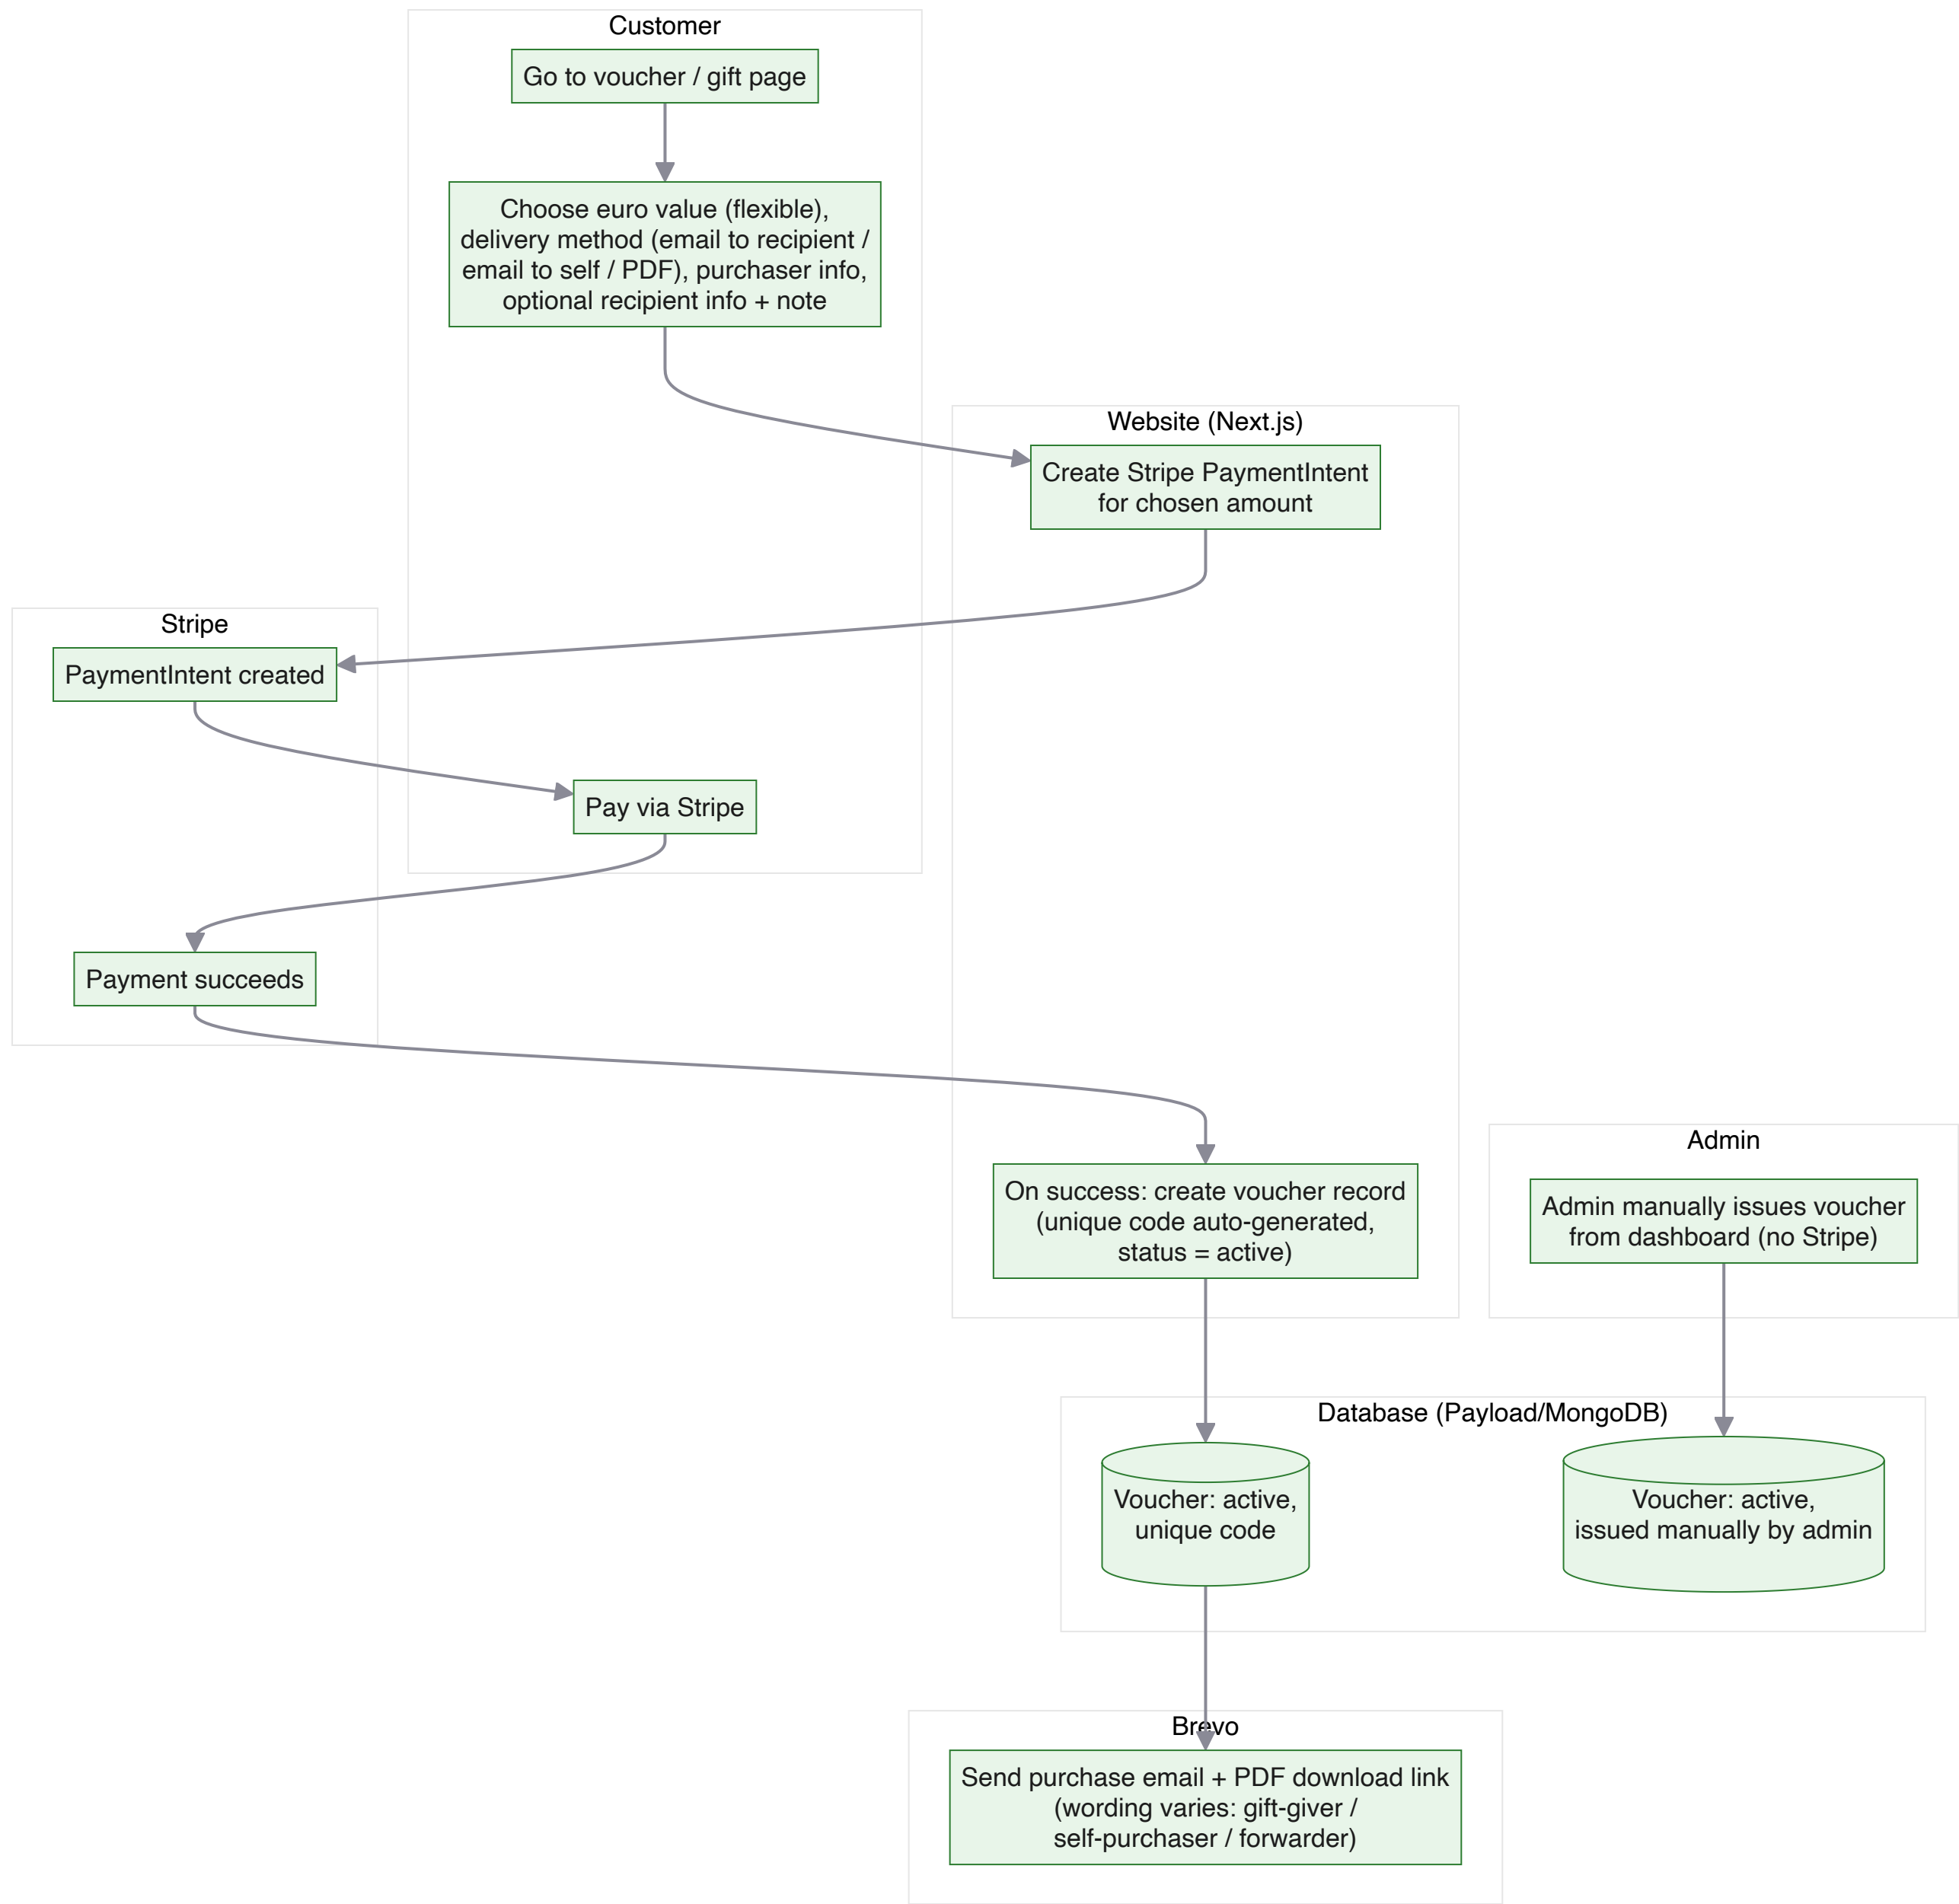

-  Solid green box — confirmed working today
-  Dashed orange box — exists but broken ("⚠️ known bug")
-  Dashed gray box — referenced/planned but doesn't work ("🚧 not built yet")
-  Diamond / rounded — decision point

Each flow diagram is sized to its natural, full resolution for legibility — pages vary in size, similar to unfolding a large-format print. Zoom to 100% for the sharpest read. Each diagram page repeats the legend and includes any relevant caveats inline.

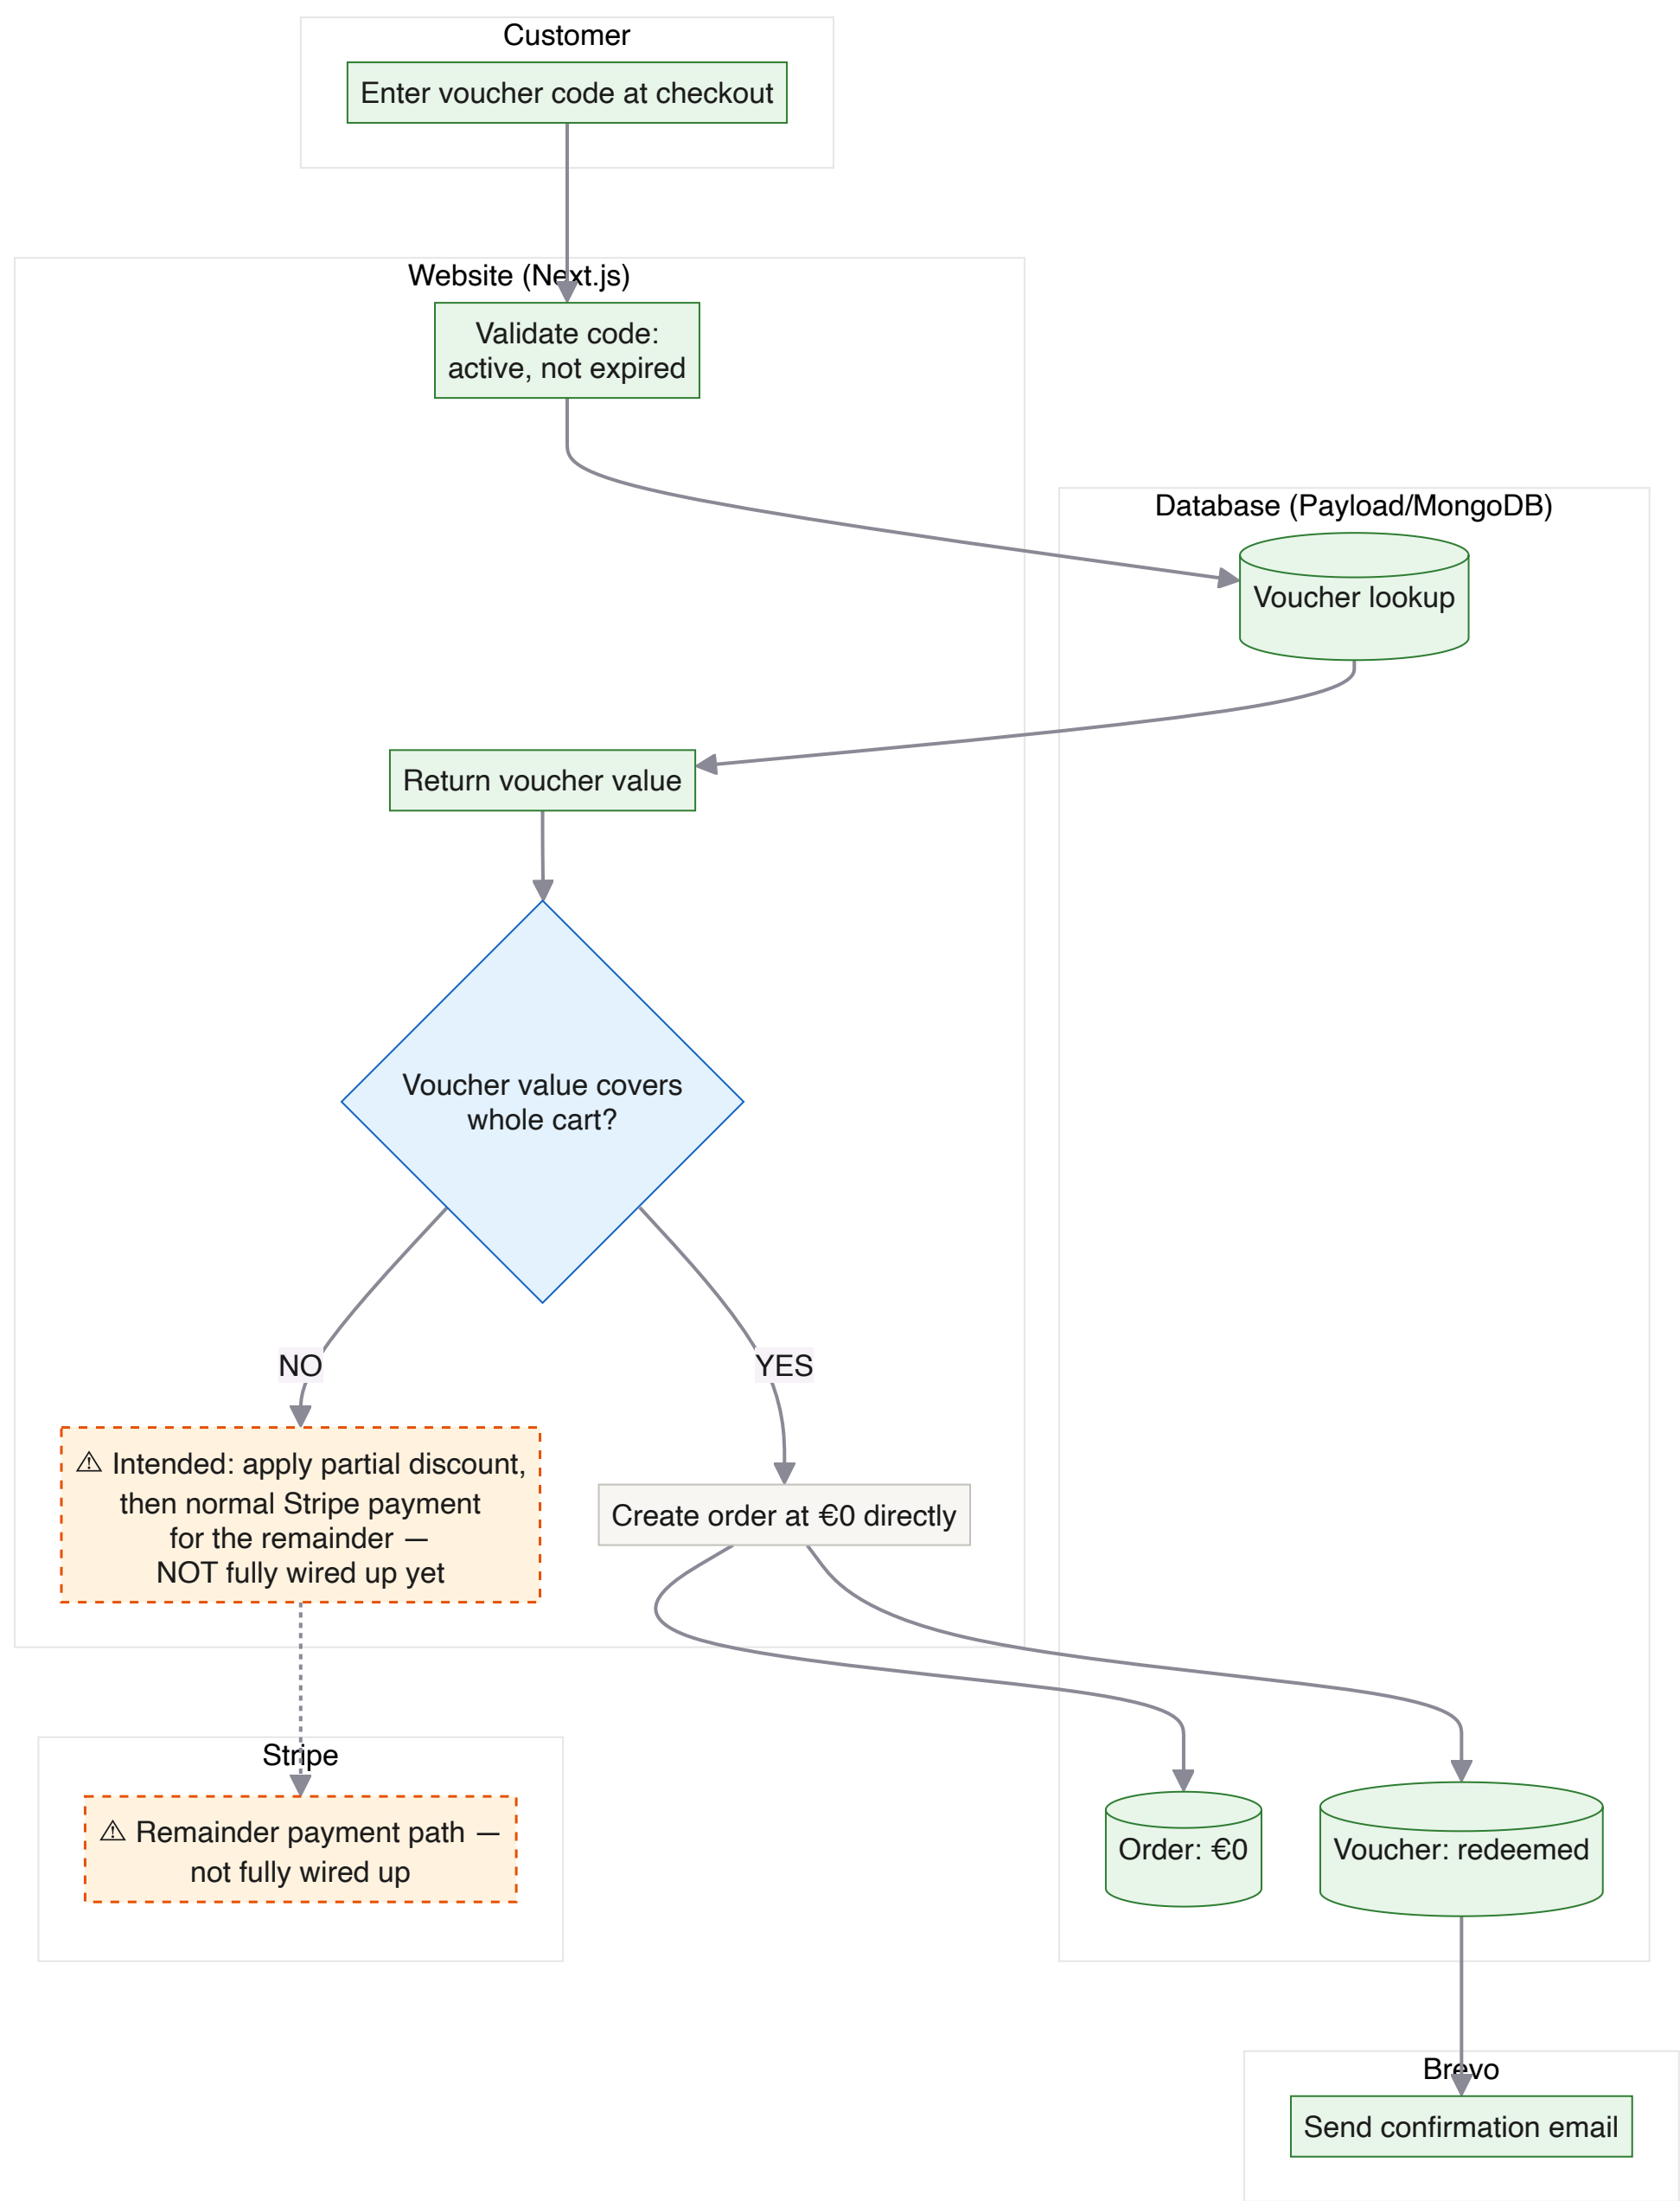

Note: voucher entry and redemption logic (including the partial-coverage bug) lives entirely in Flow 3 — not duplicated here to keep this diagram readable.

Flow 2 — Gift voucher purchase

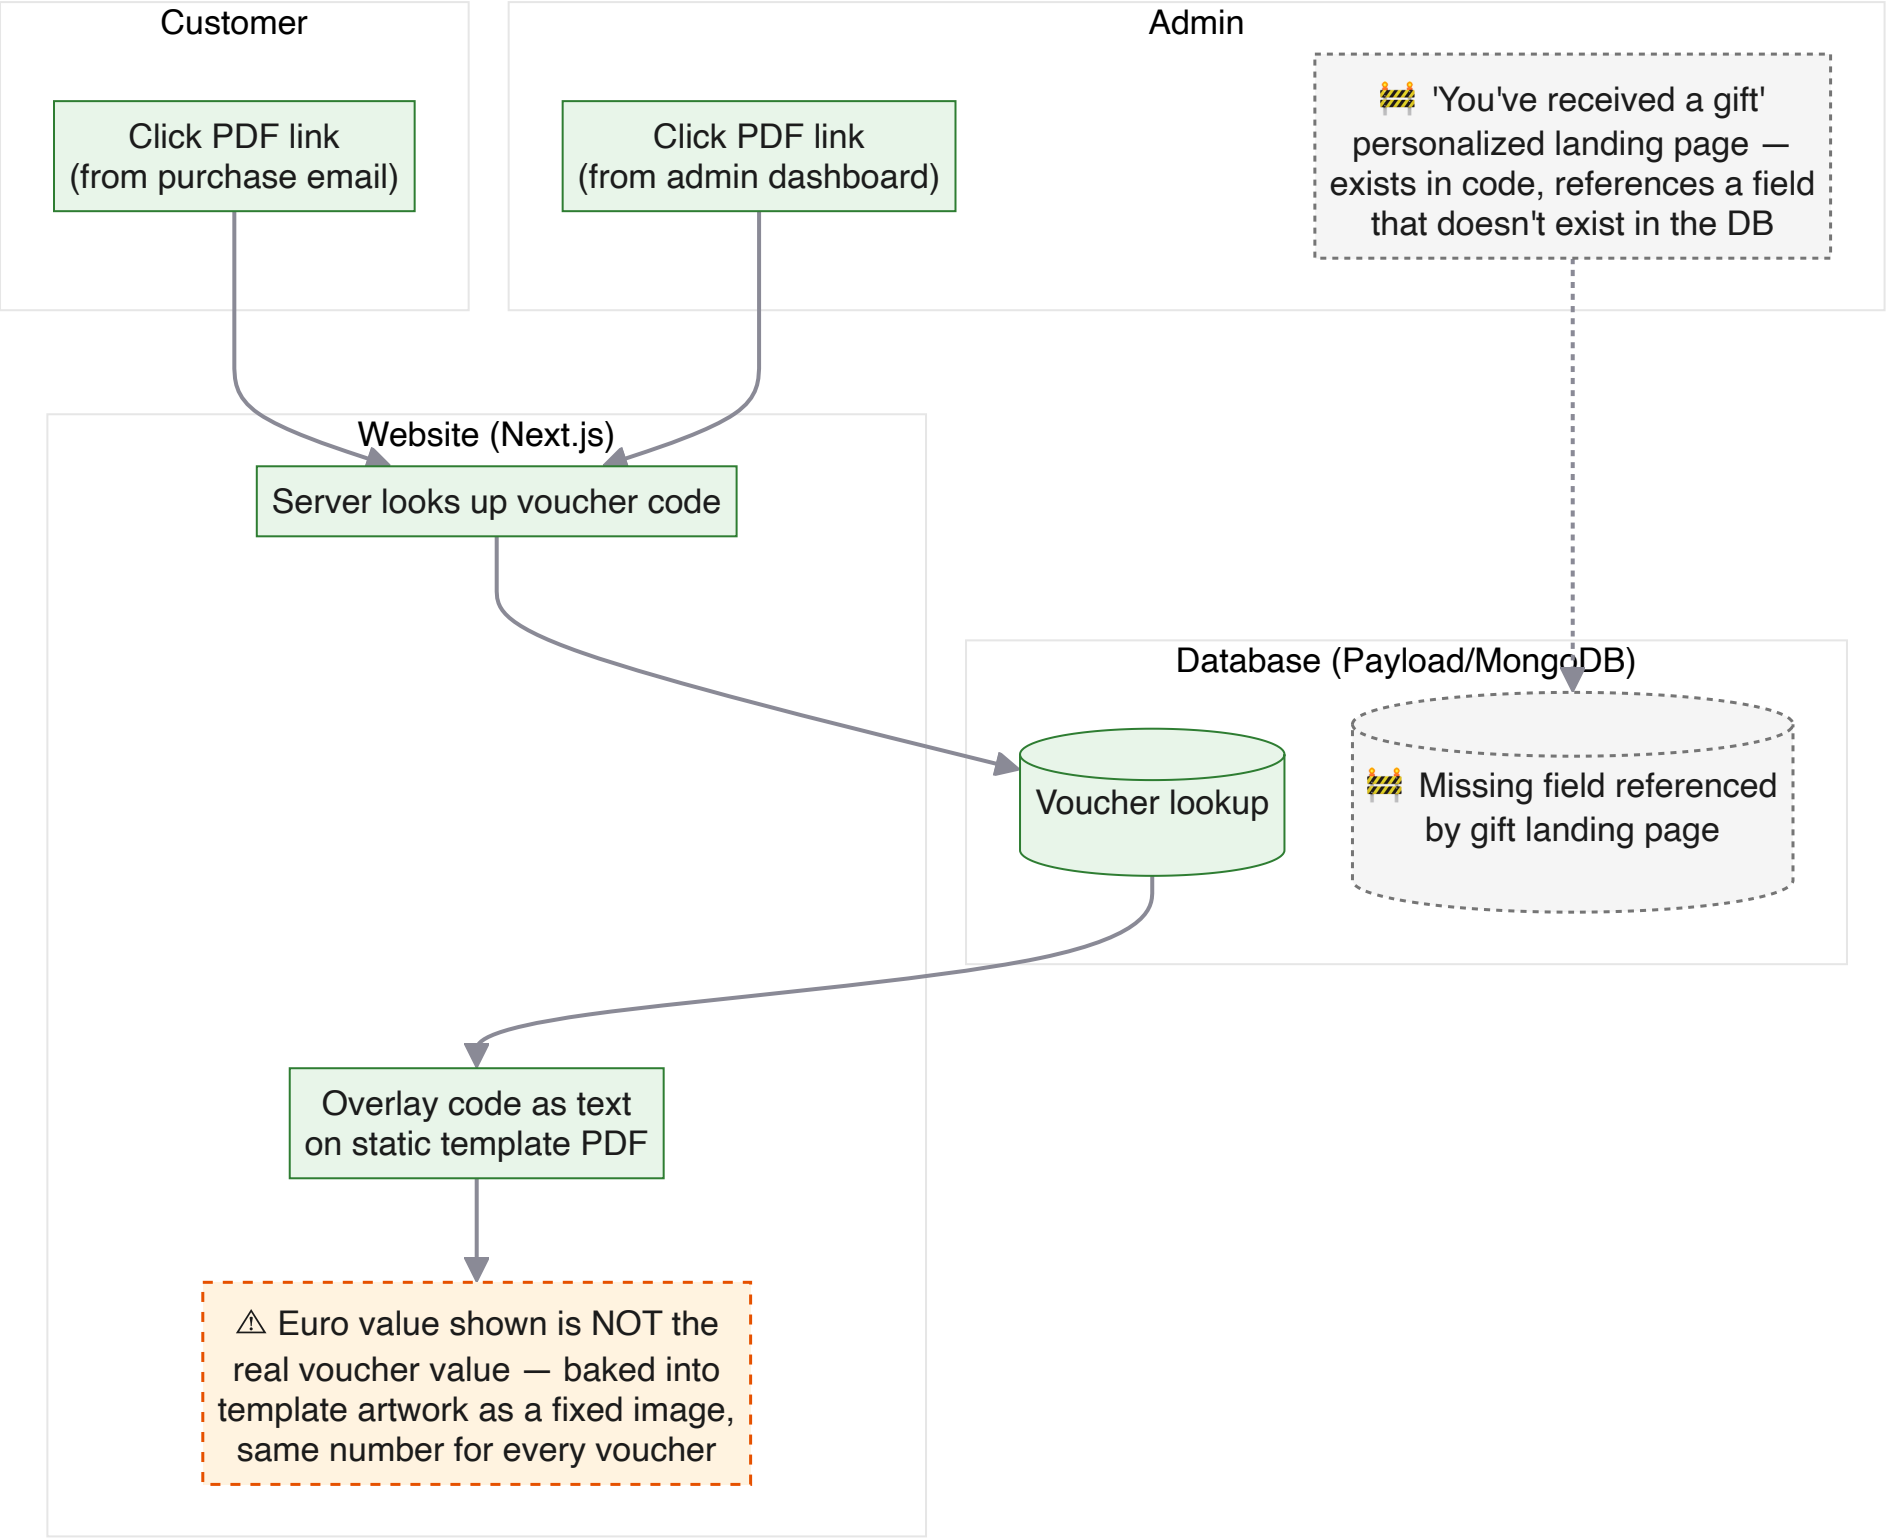

Flow 3 — Redeeming a voucher at checkout

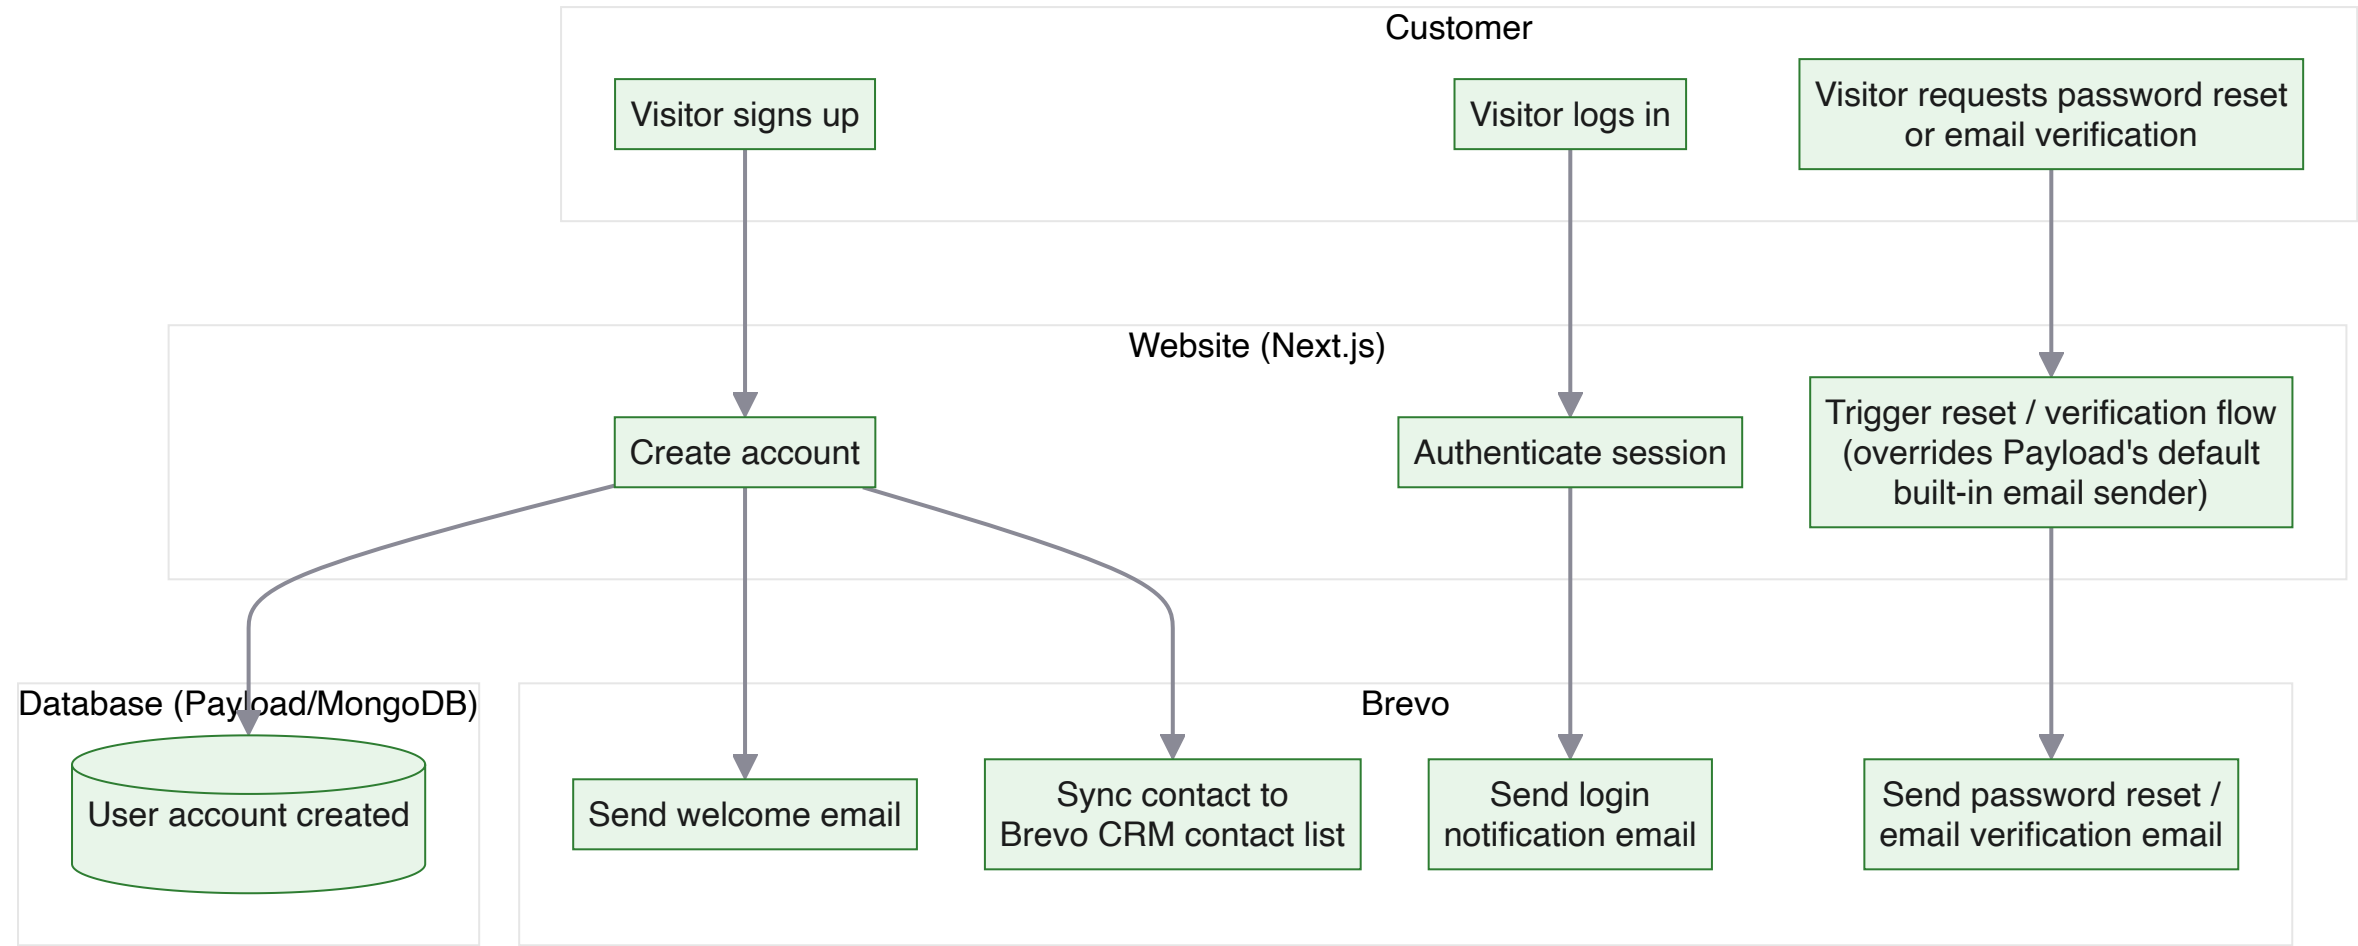

⚠ **Known bug:** when a voucher only partially covers the cart, the system has no working path today — no partial-discount-then-Stripe-payment flow exists in production.

Flow 4 — PDF voucher download

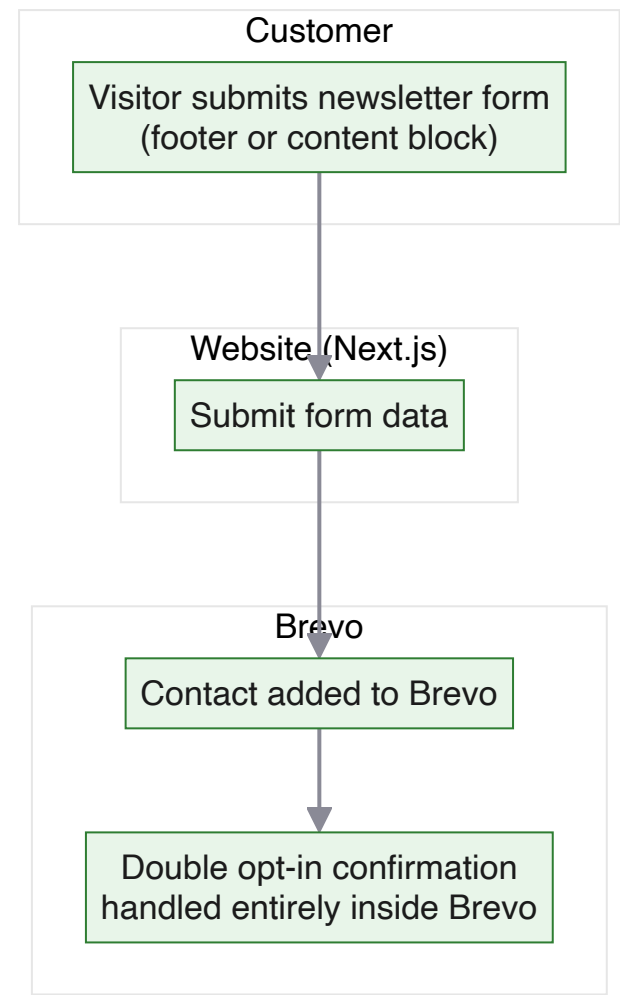

⚠️ **Known bug:** PDF shows a fixed placeholder amount regardless of actual voucher value. ⚠️ **Not built:** the personalized "gift received" landing page is non-functional (missing DB field).

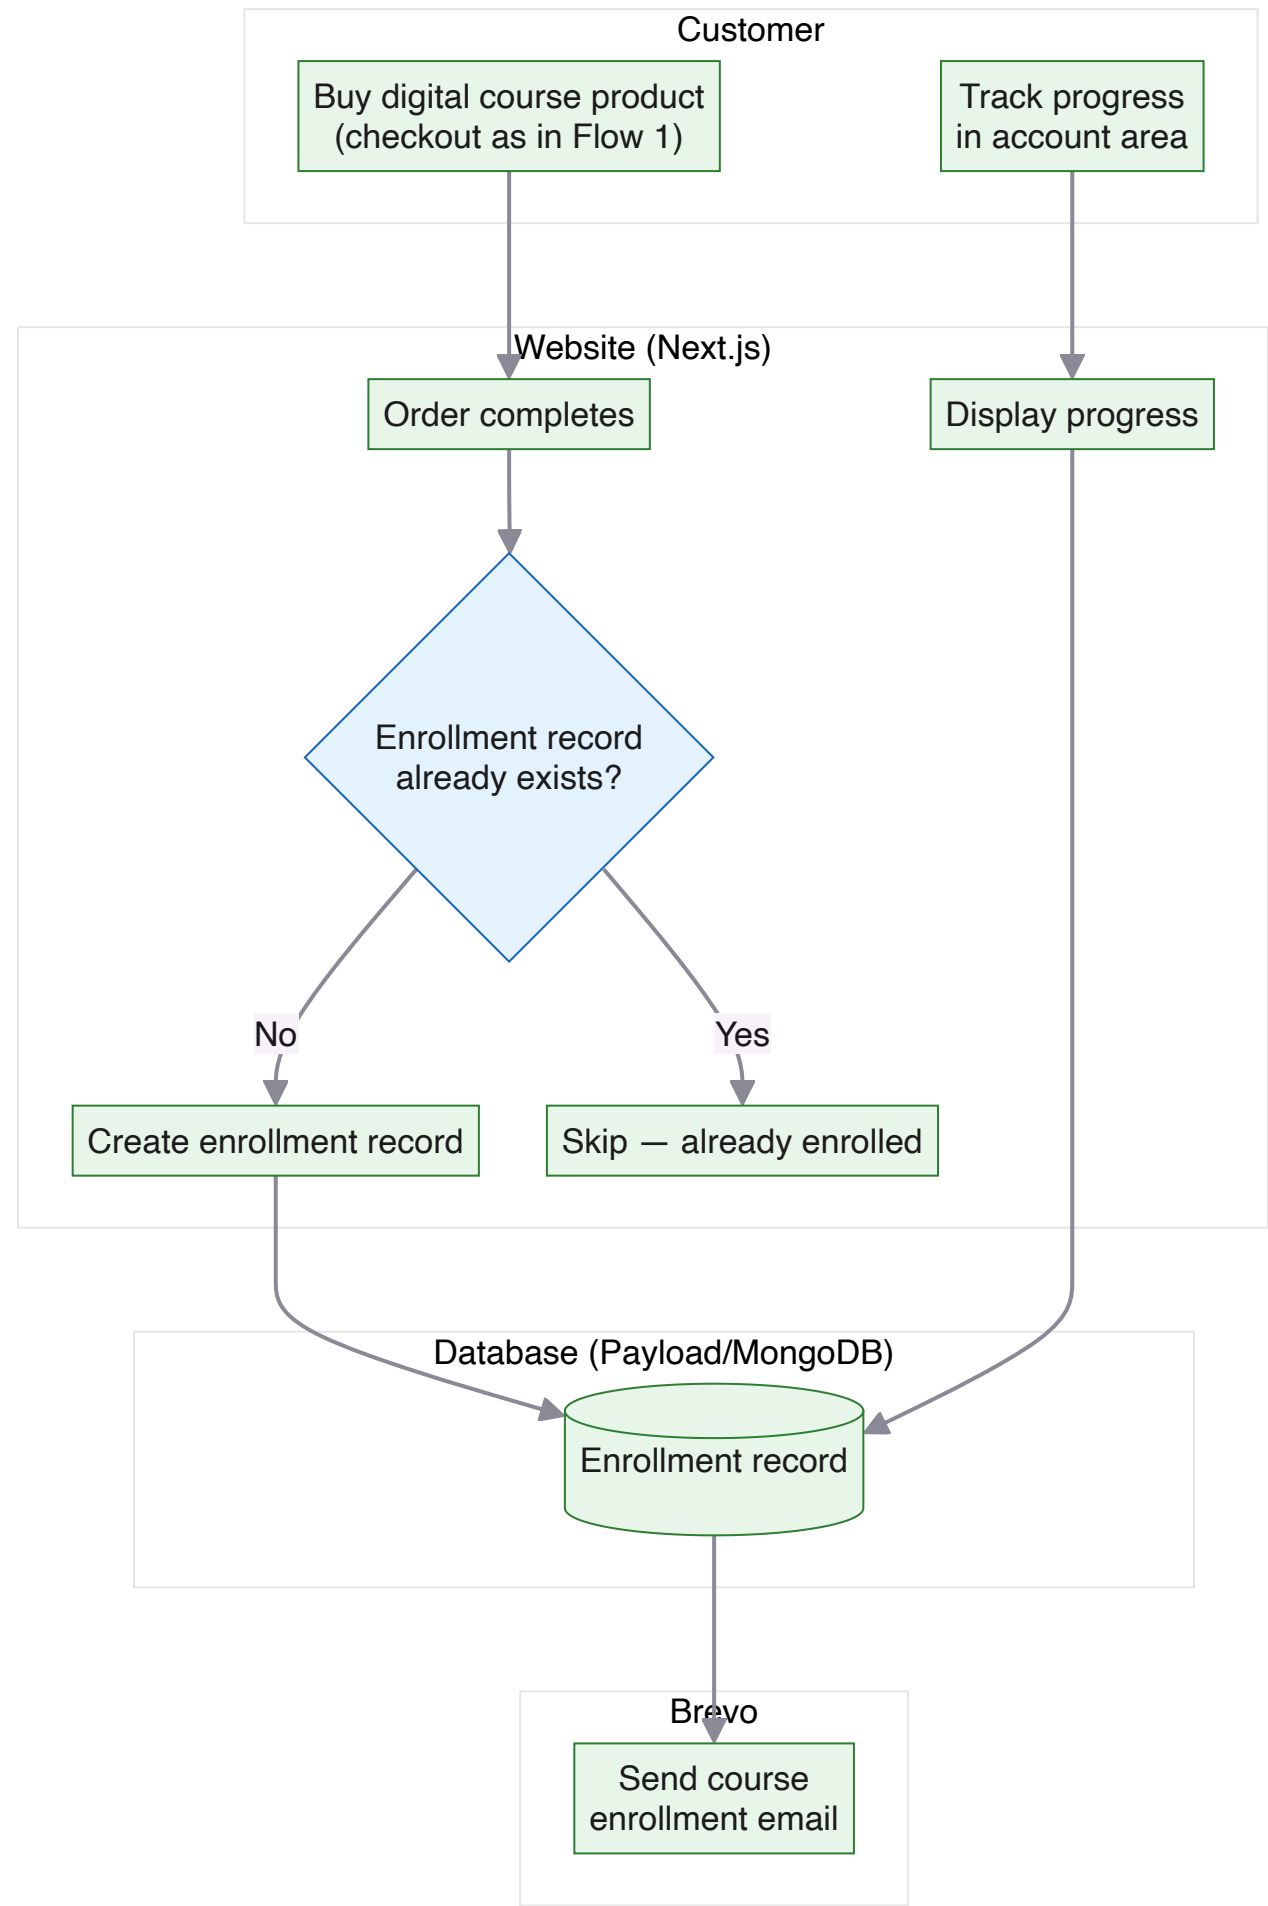

Flow 5 — Account creation, login, password reset

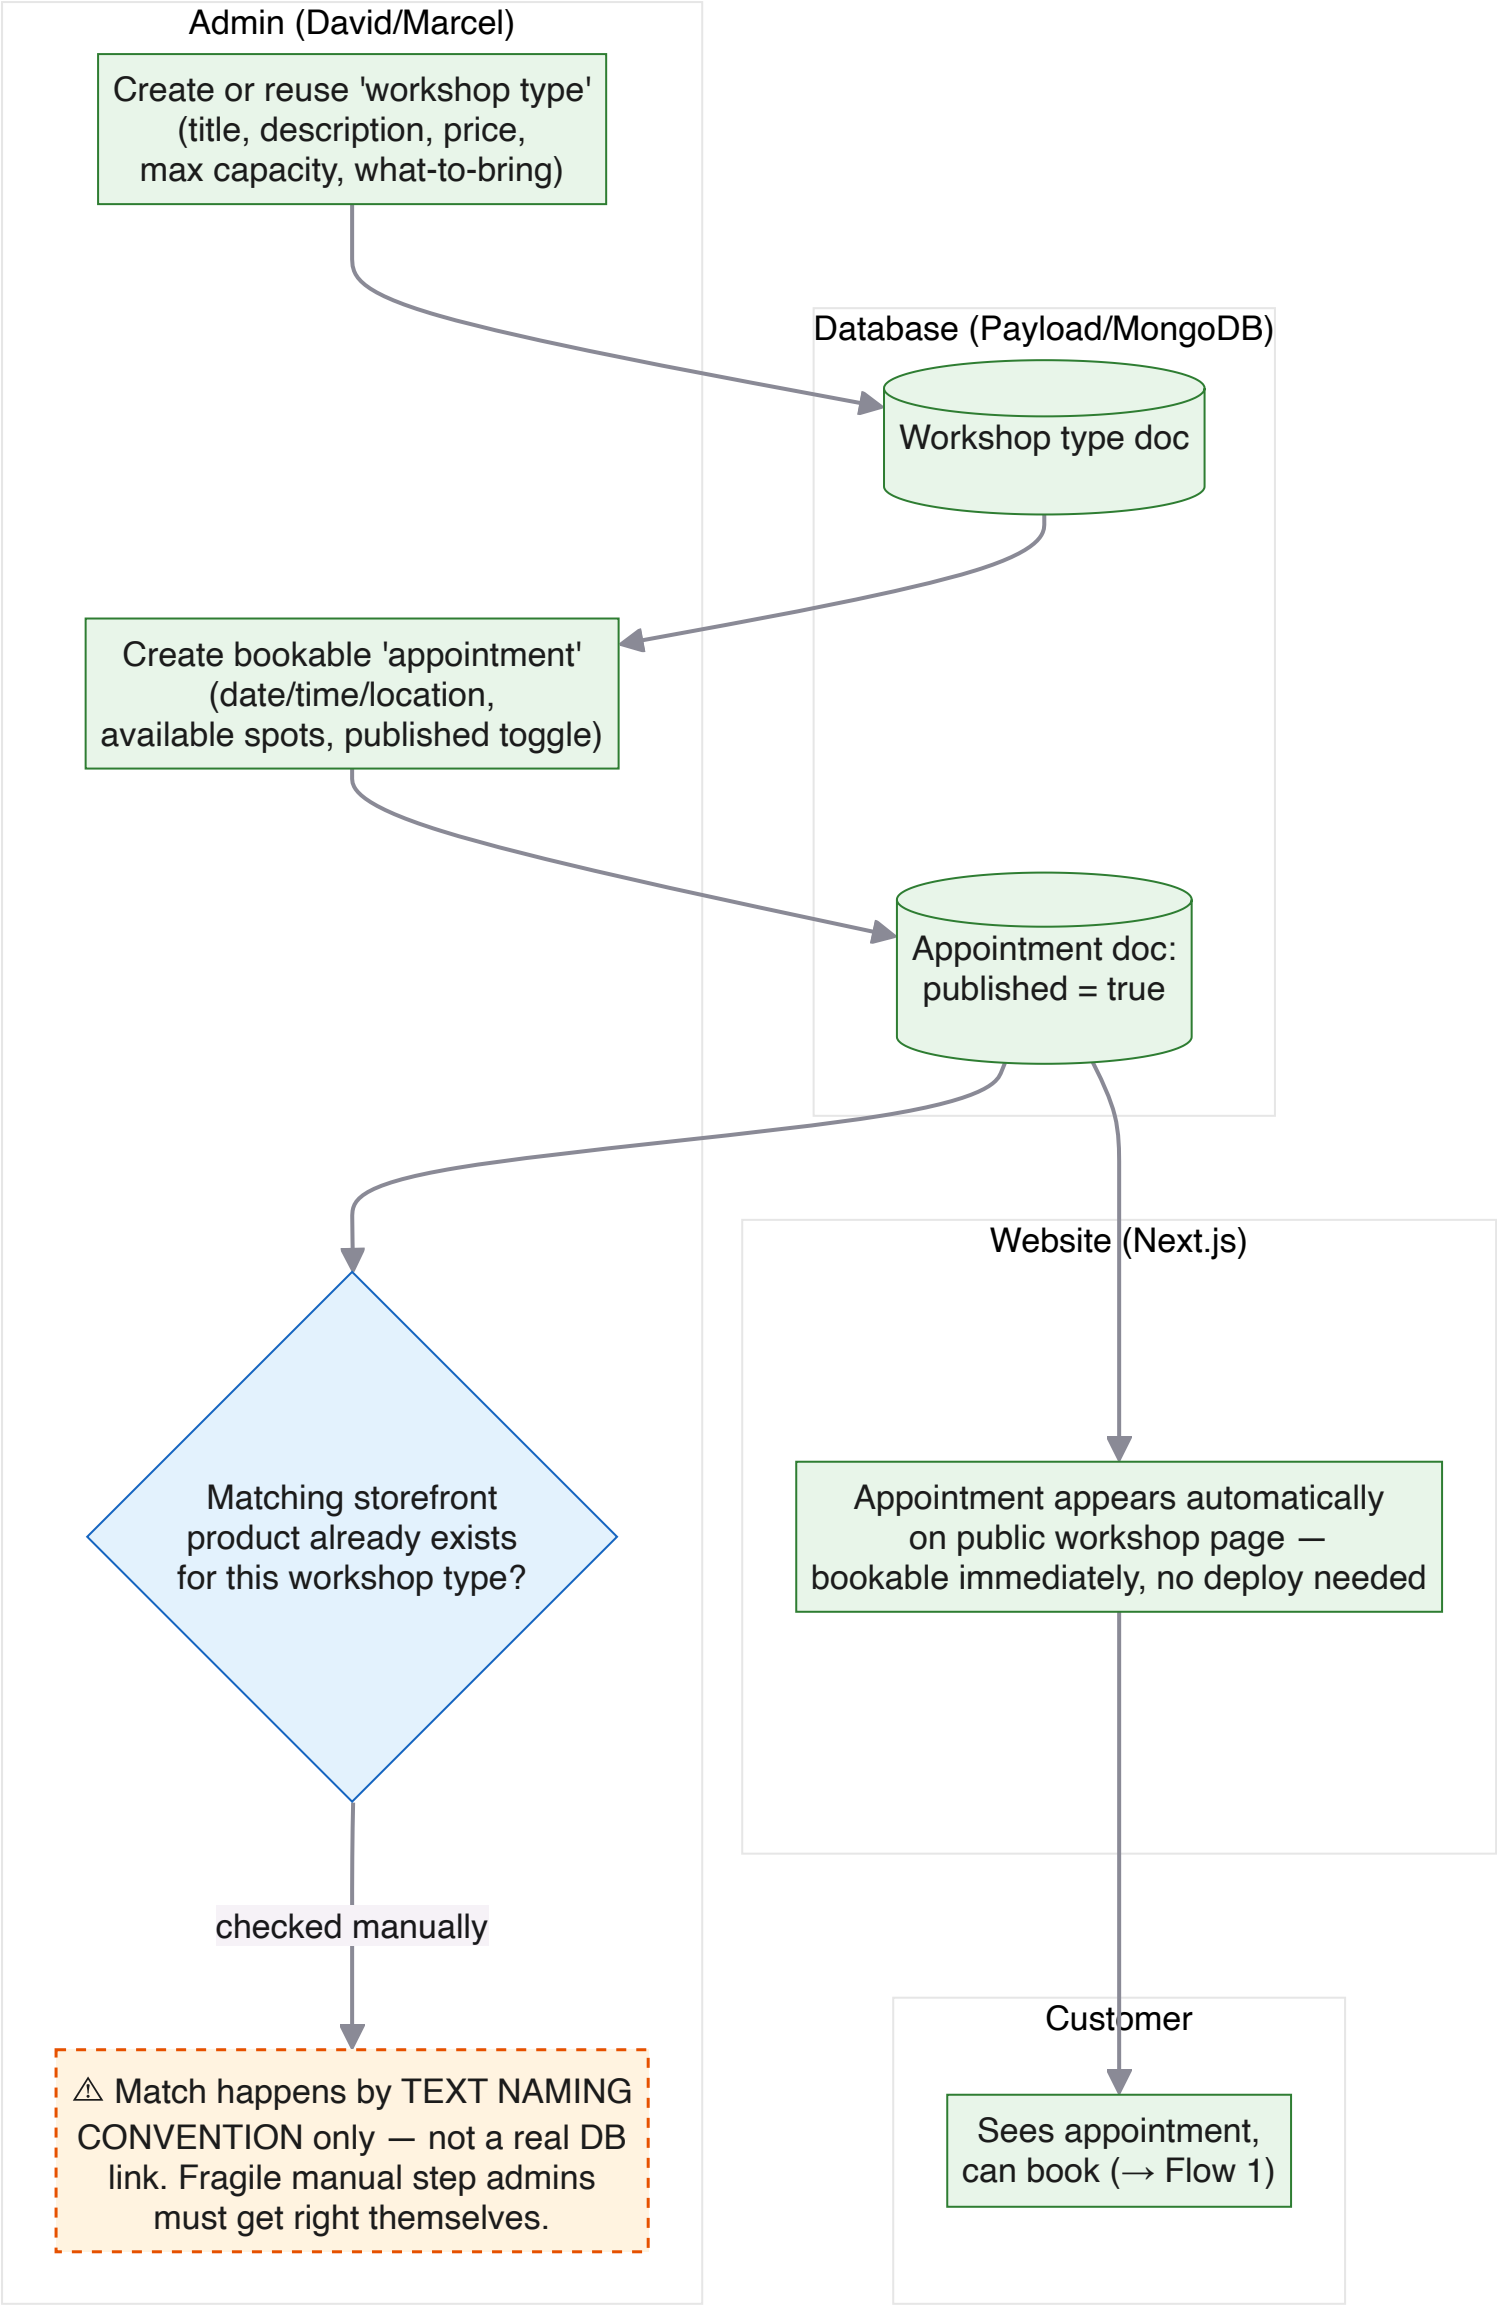

Flow 6 — Newsletter signup

Flow 7 — Digital course purchase & enrollment

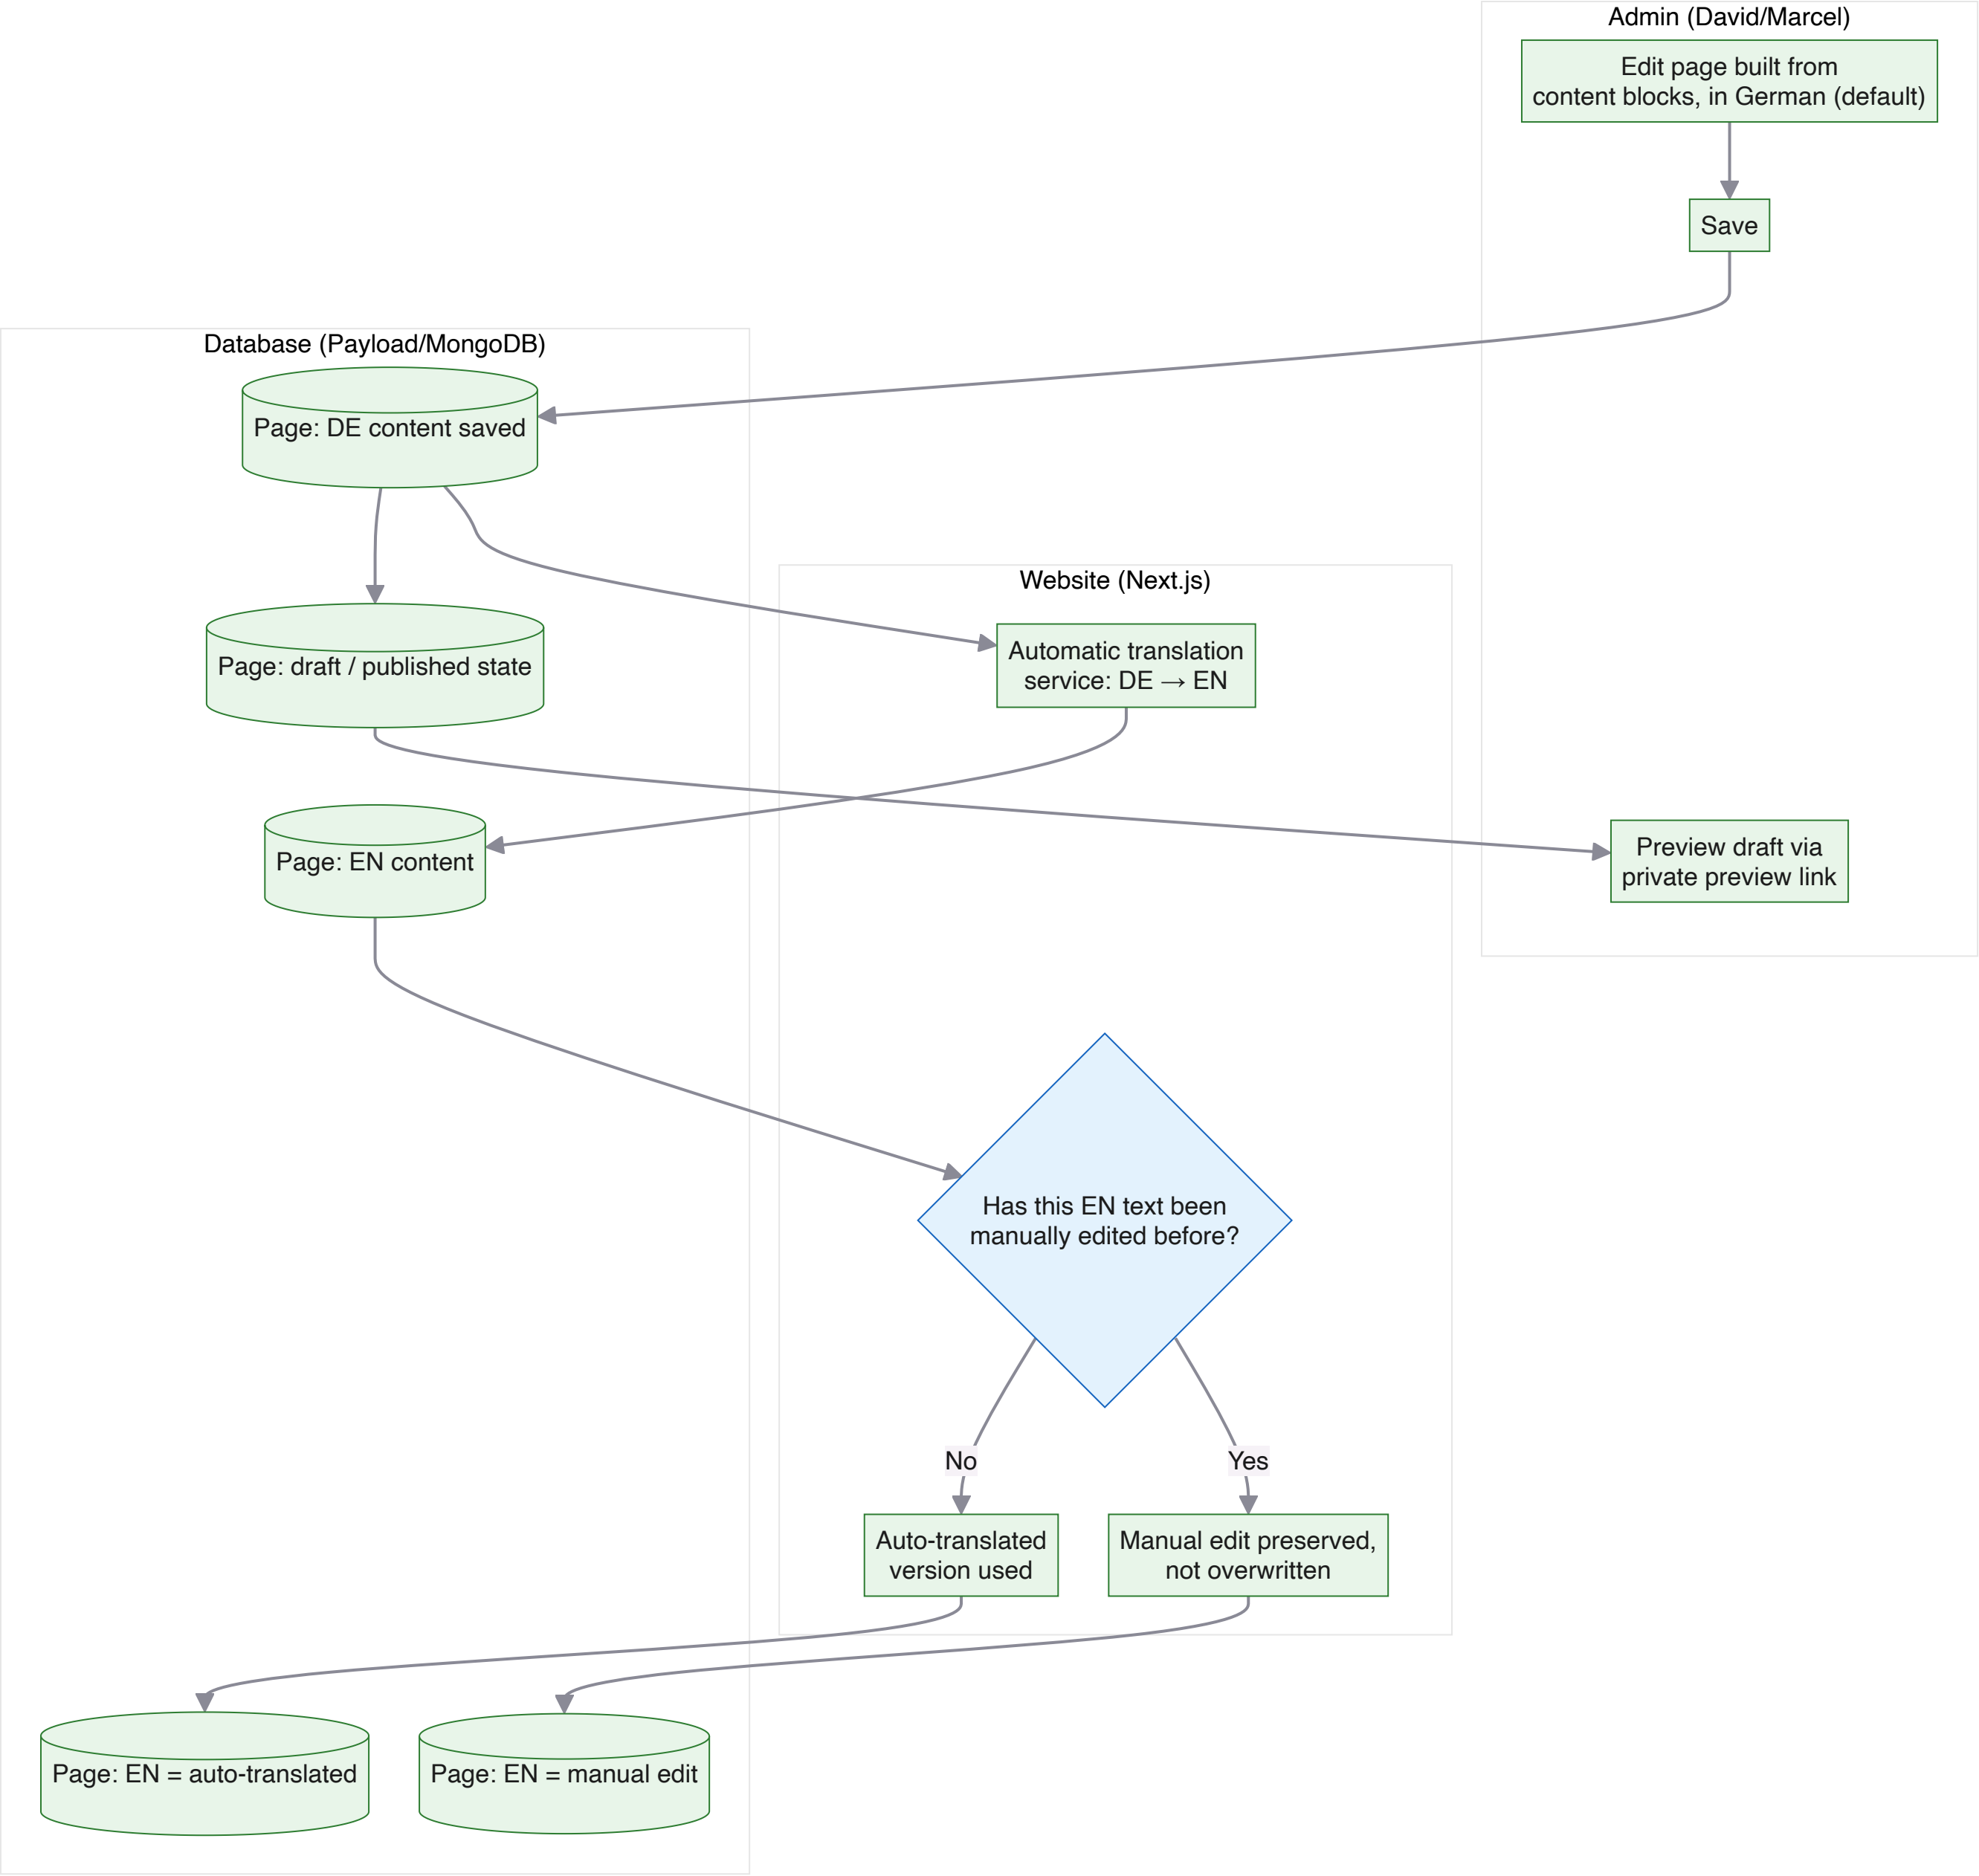

Flow 8 — Admin: publishing a new workshop (no developer involved)

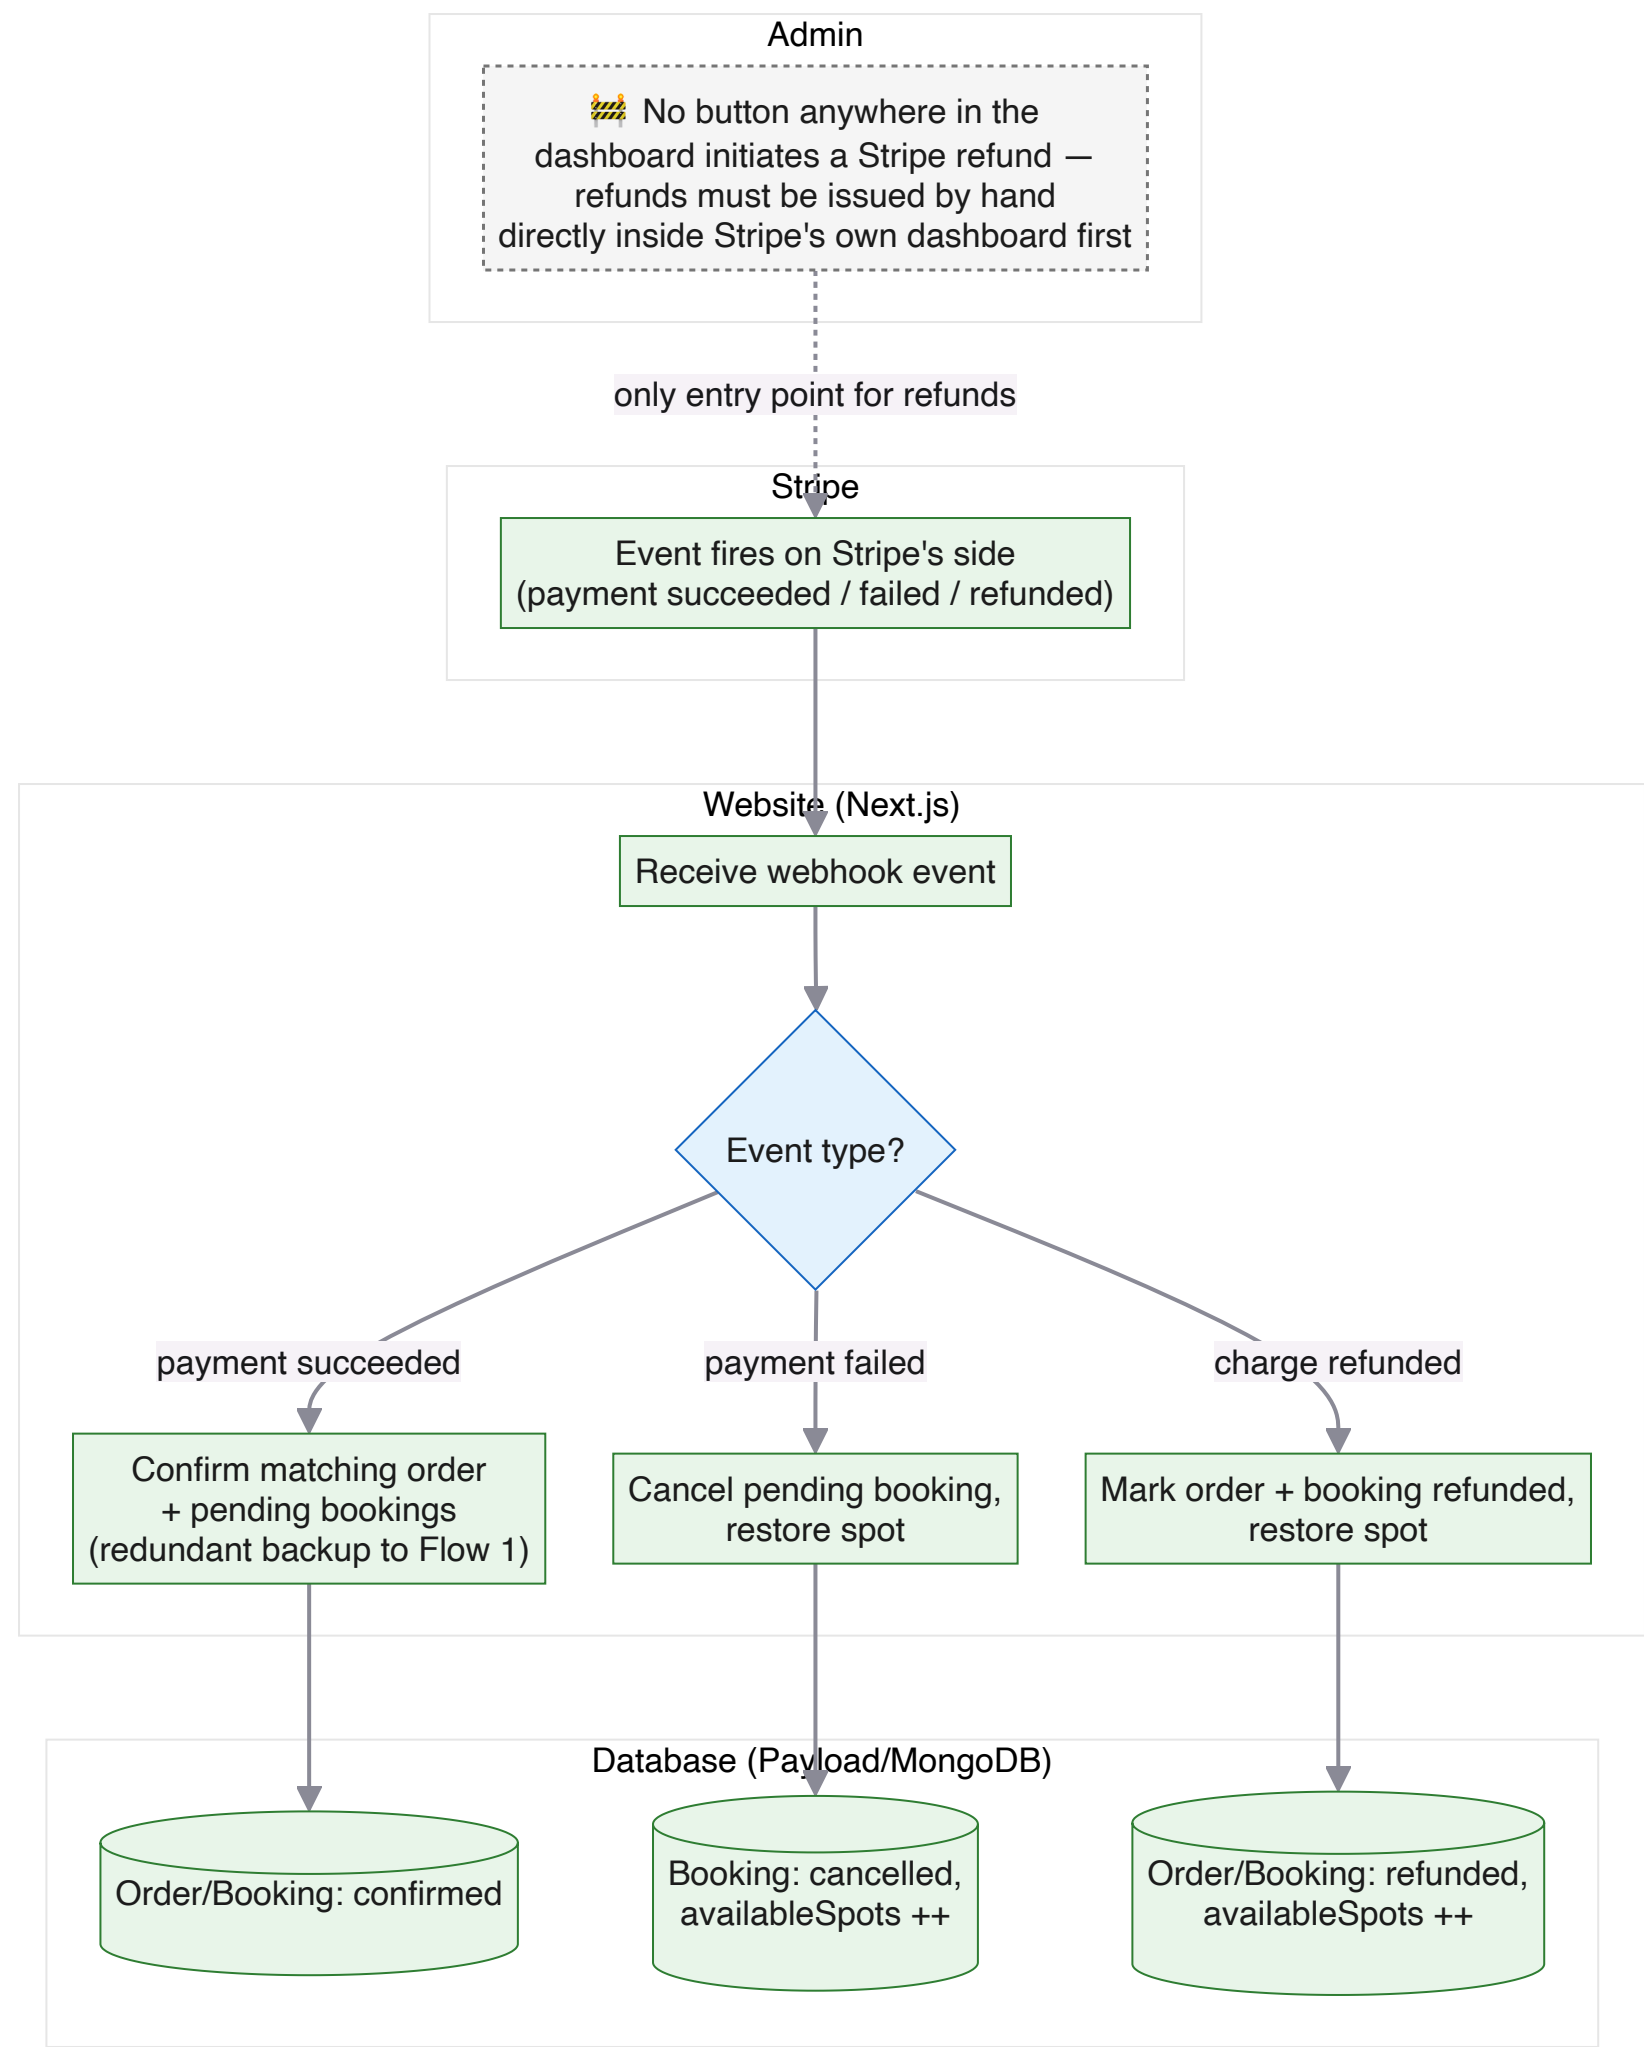

⚠ **Known bug / fragile:** product↔workshop matching relies on naming convention text-matching, not an enforced database relationship.

Flow 9 — Editing website content (bilingual)

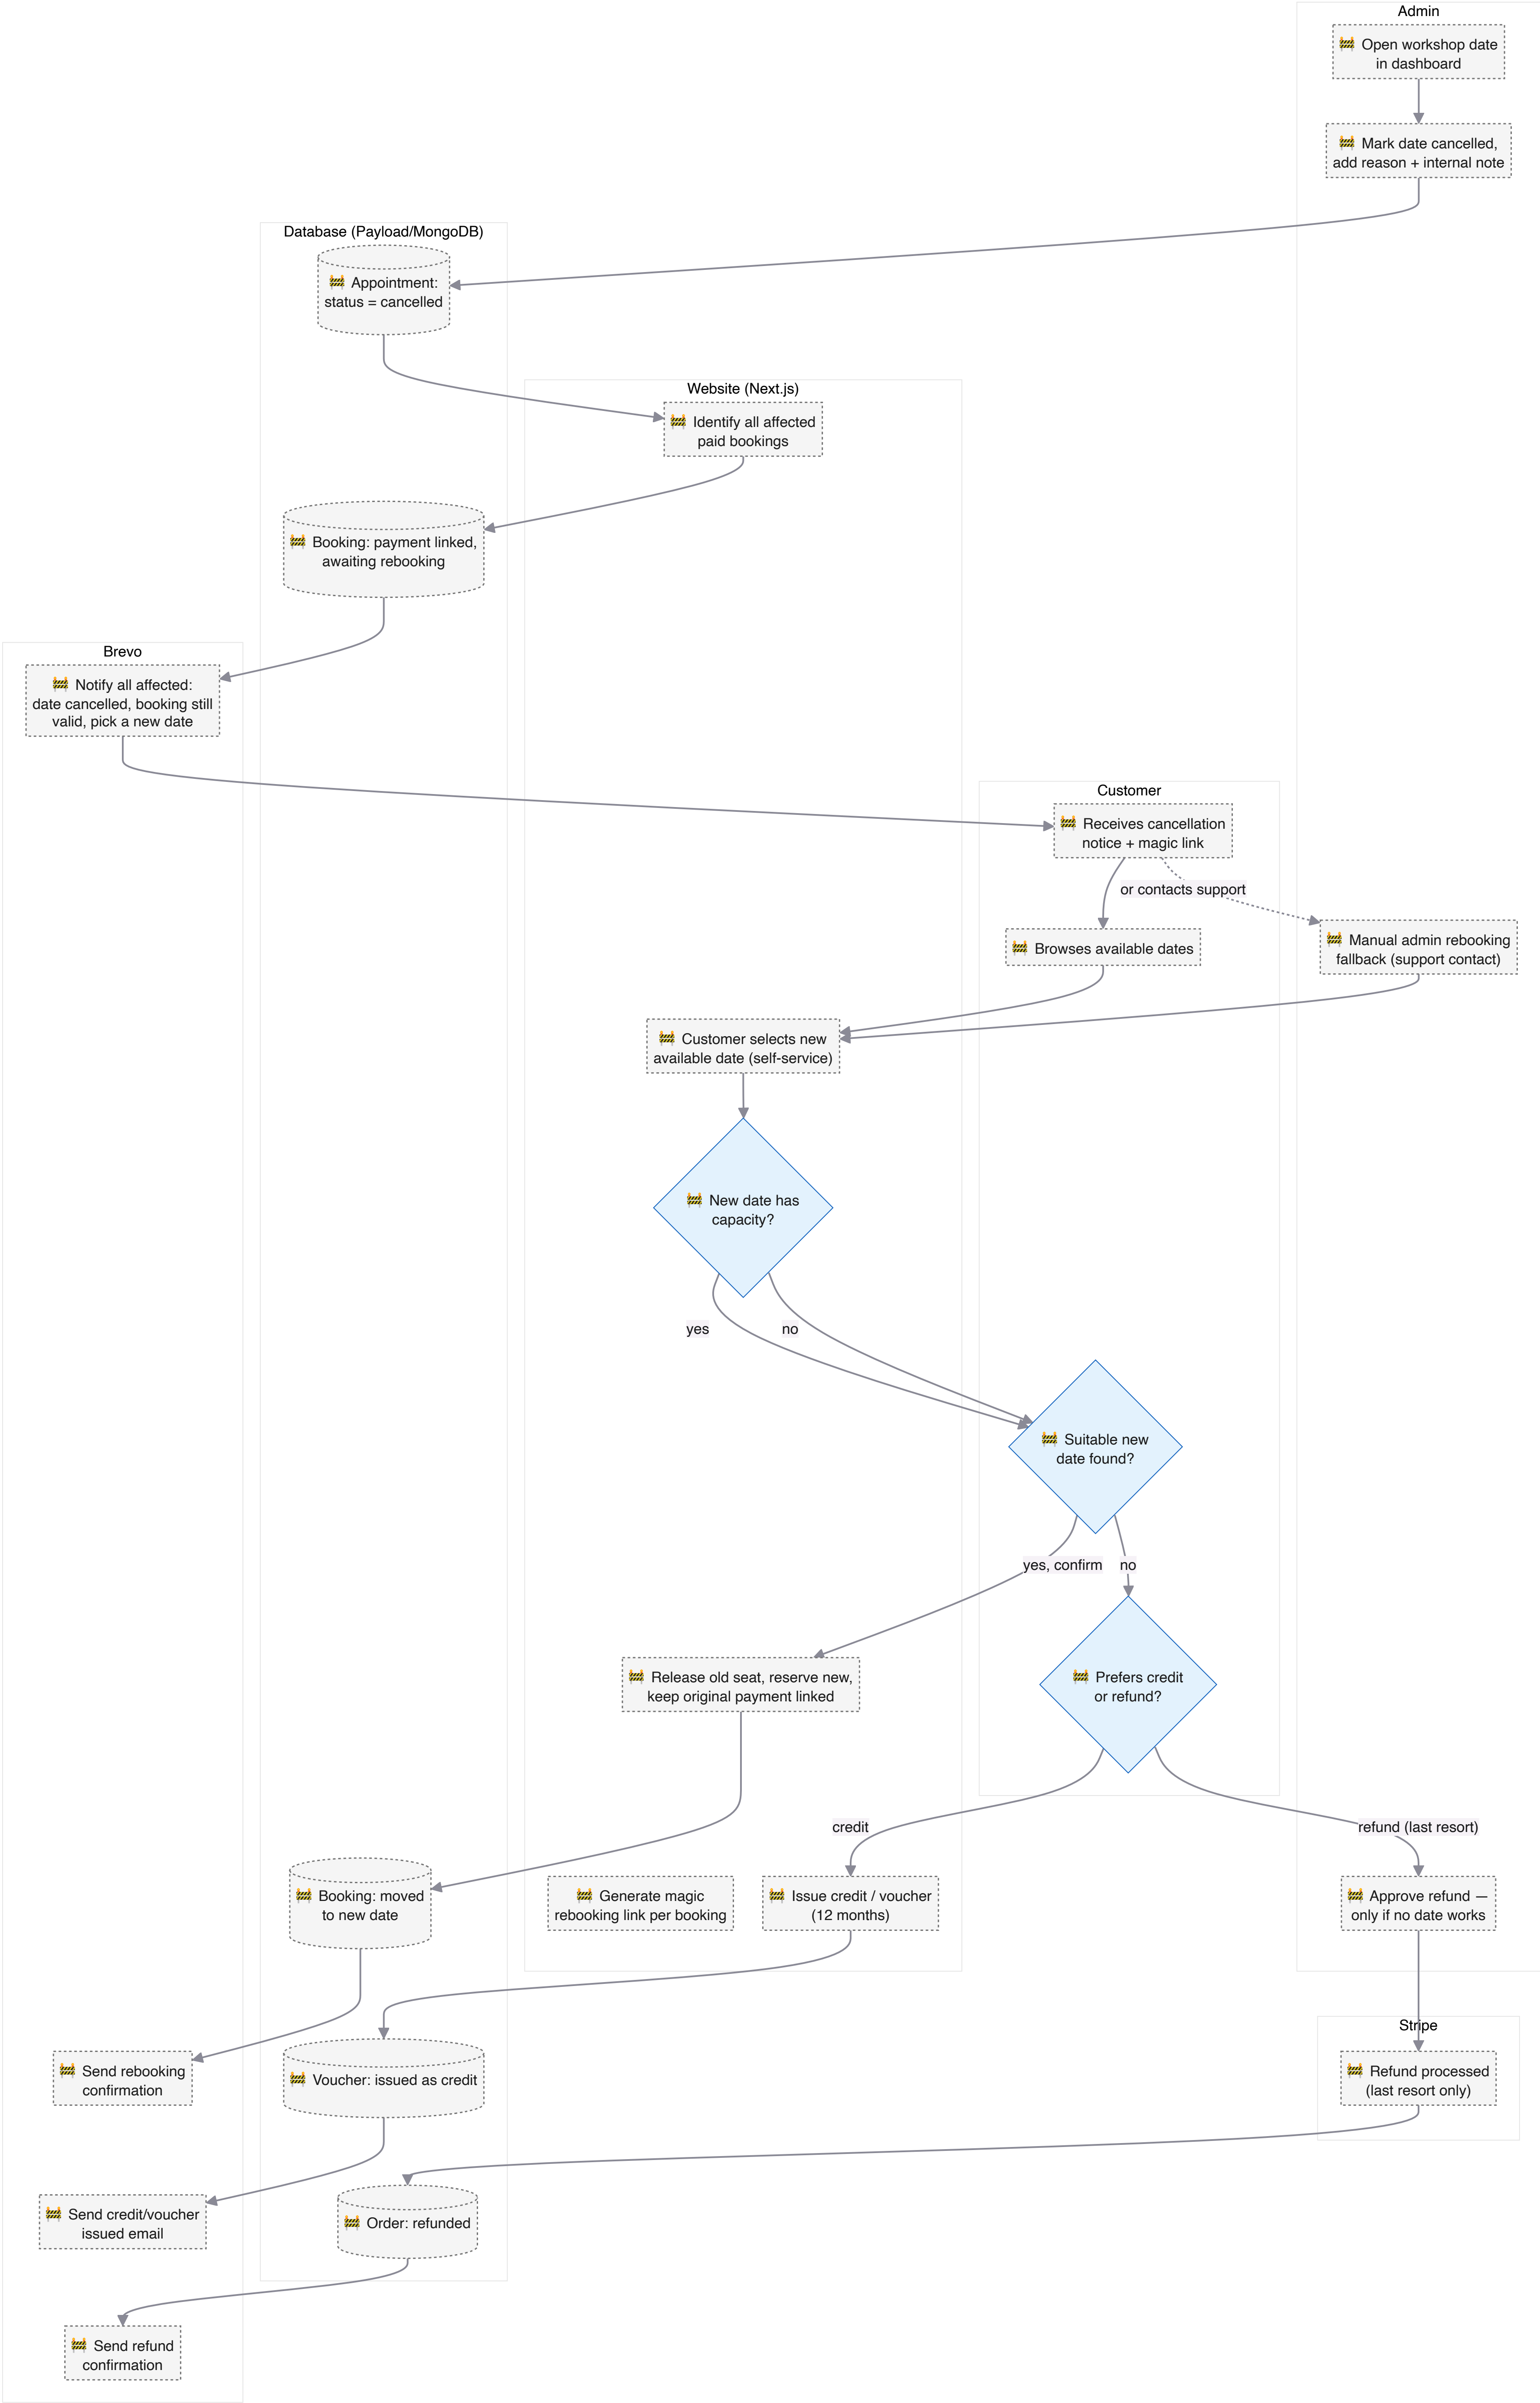

Flow 10 — Stripe webhook reconciliation (background, runs independently of checkout)

🚧 **Not built:** this reconciliation is the **only** refund automation that exists — there is no in-dashboard refund-initiation button; refunds start manually inside Stripe itself.

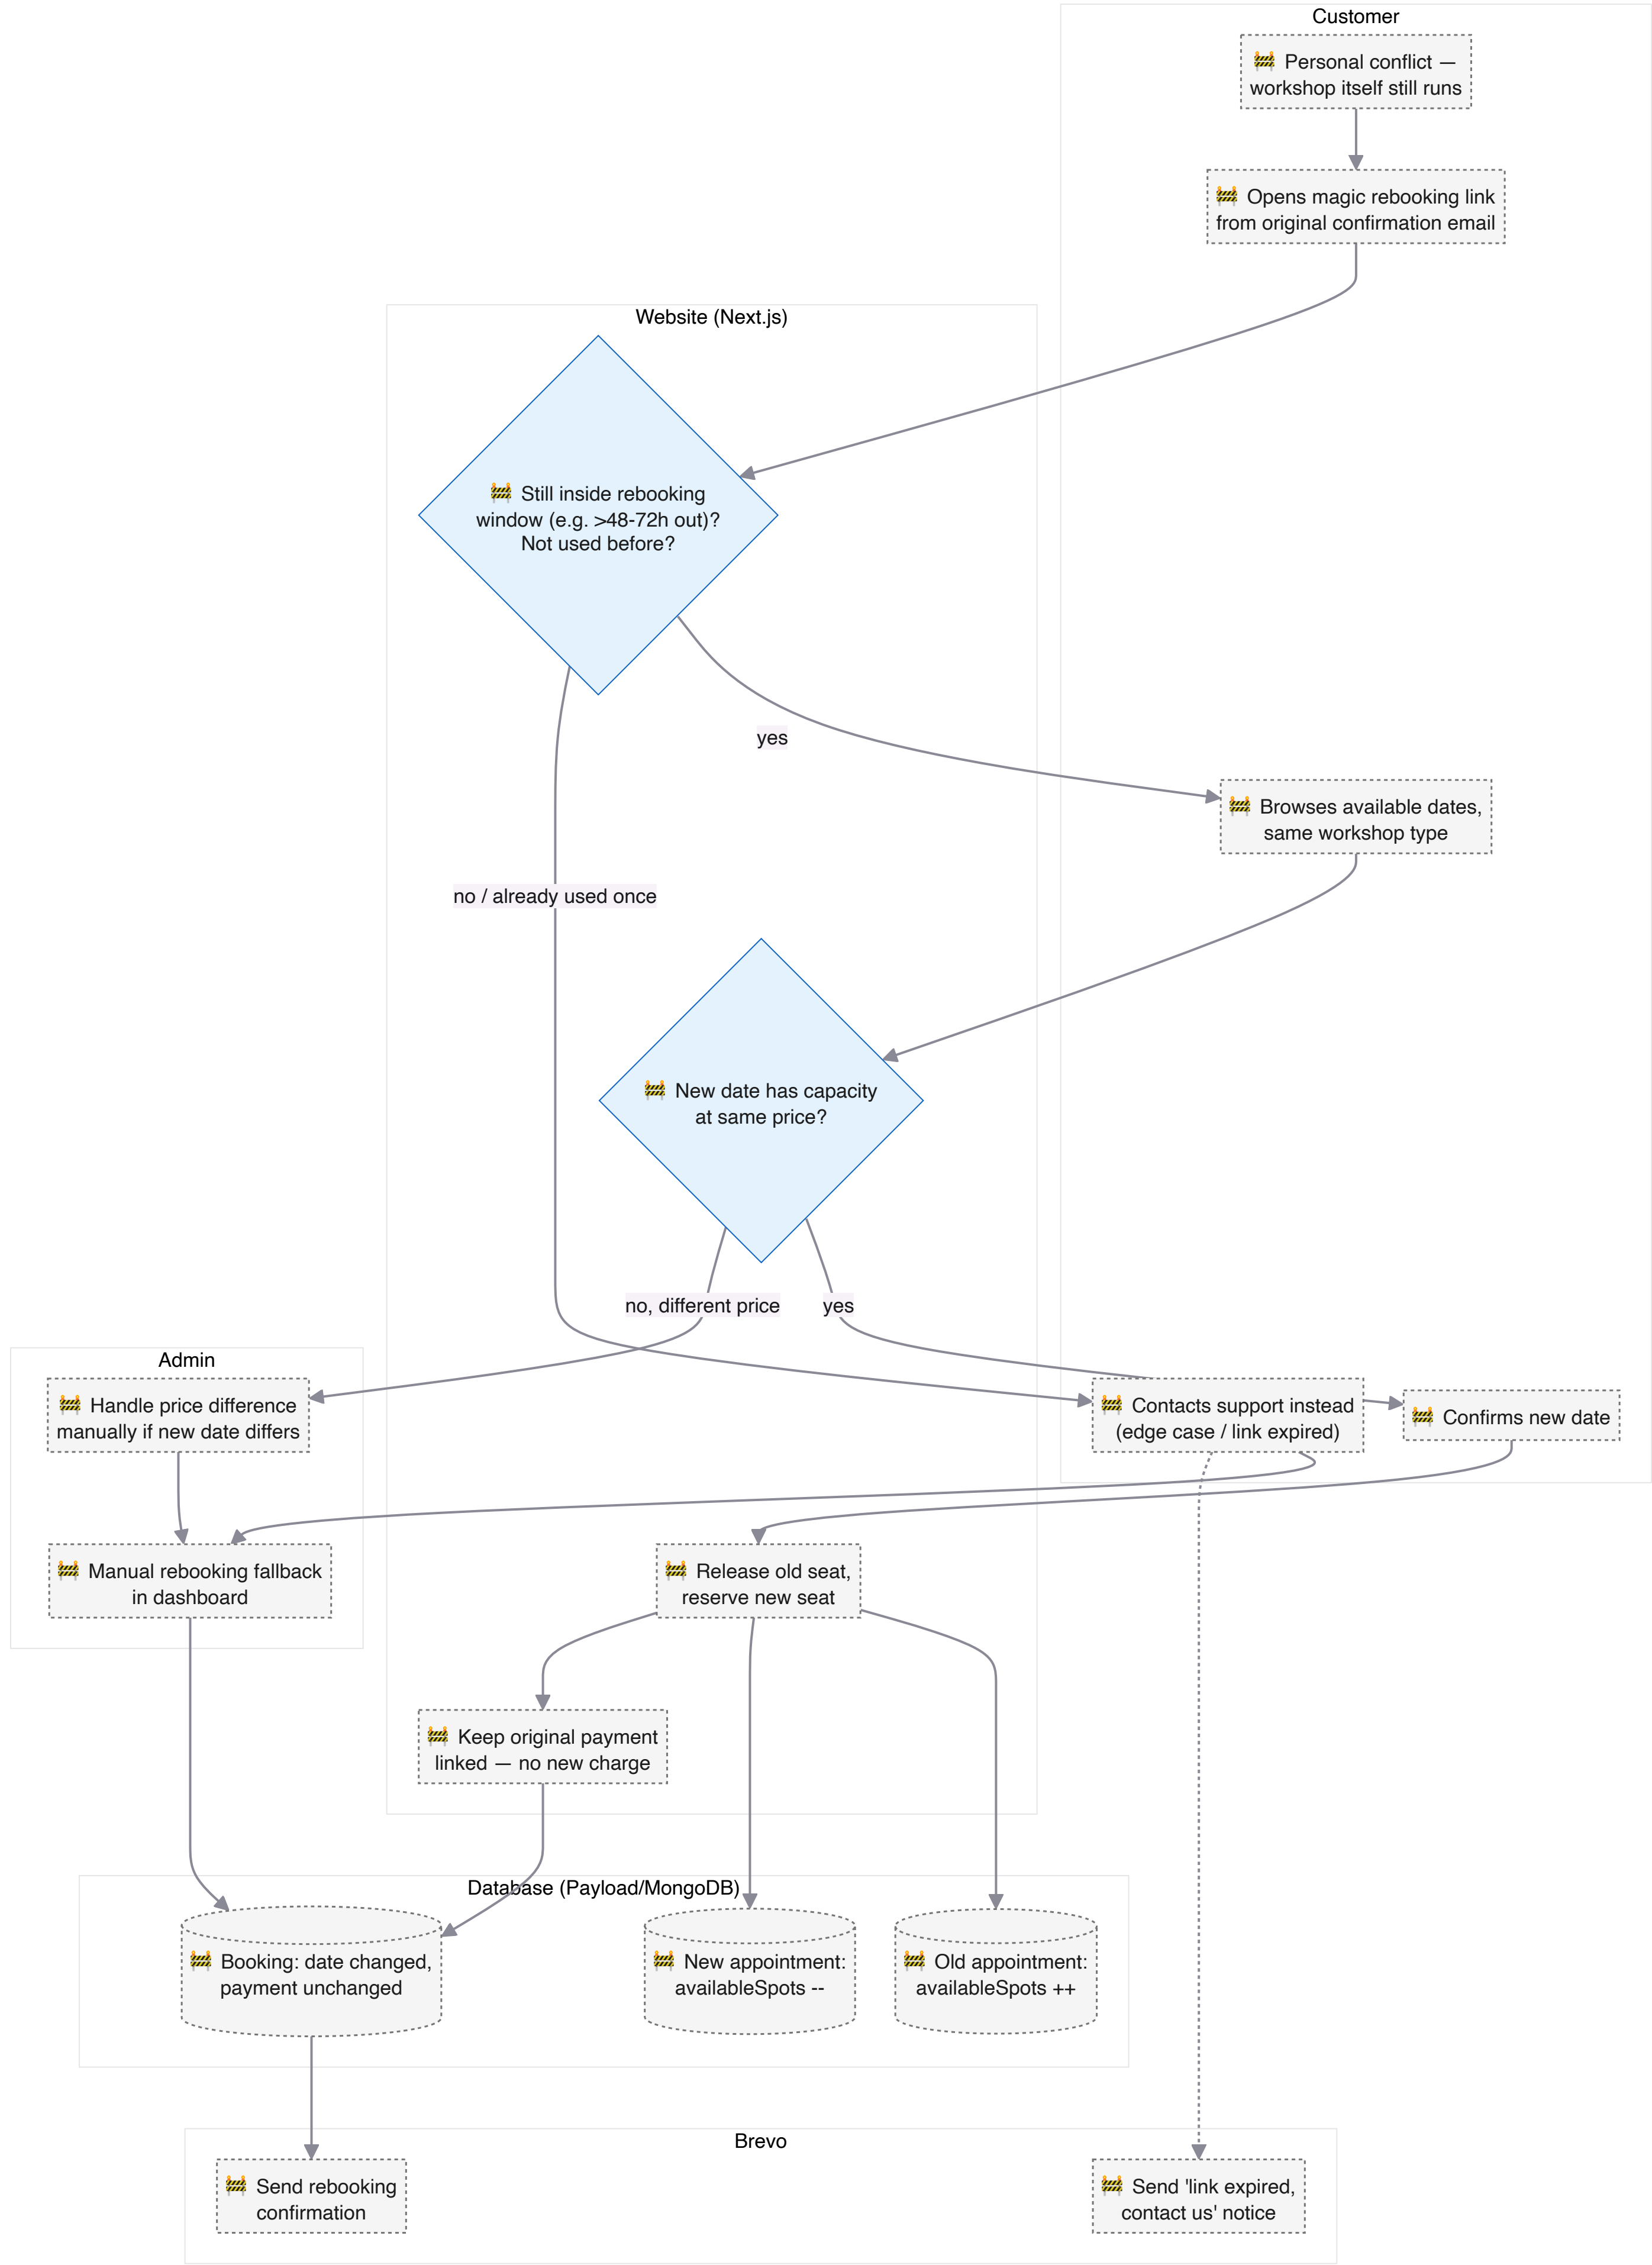

Flow 11a — Admin cancels a full workshop date (David's Case 1)

Illness, scheduling conflict, or too few participants force a whole date to be pulled. Payments stay linked to the customer (nothing auto-refunds); everyone affected gets a magic-link invite to self-serve a new date, with manual admin rebooking as the fallback. Refund is offered only if no date works for the customer.

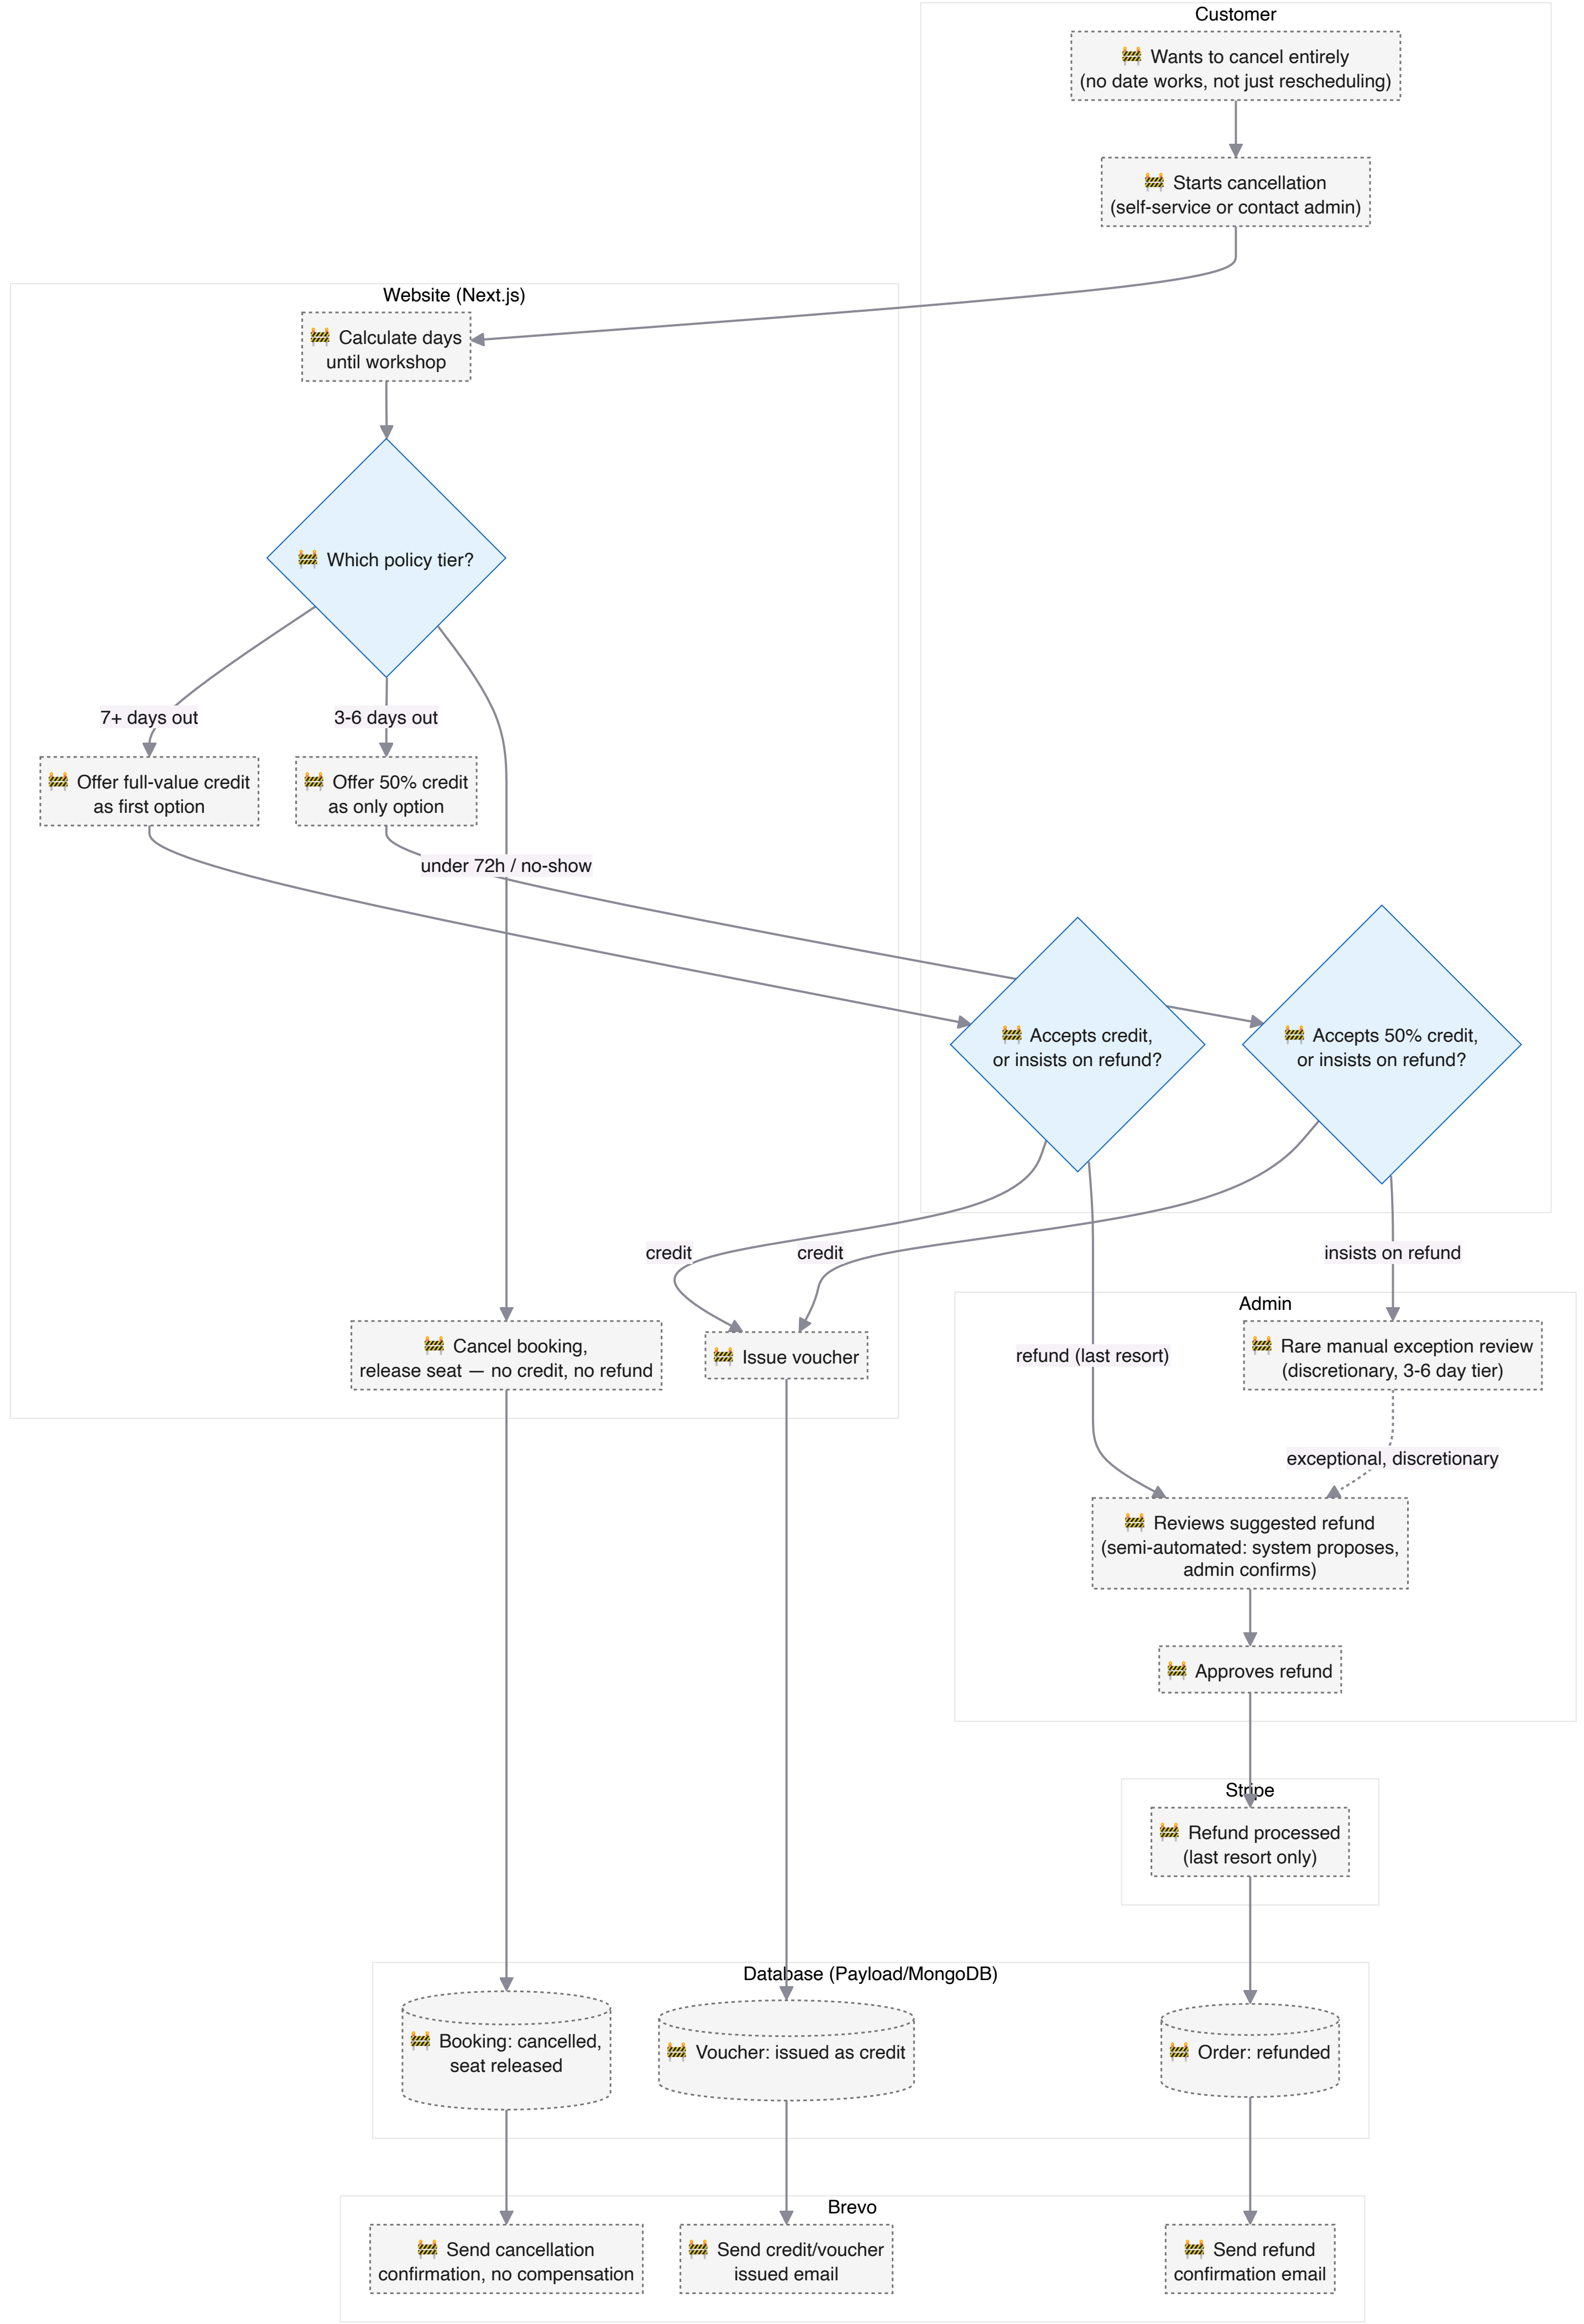

Flow 11b — Individual reschedule, workshop unaffected (David's Case 2)

One customer has a personal conflict; the session itself still runs for everyone else. Self-service via a magic link in the original confirmation email, capacity- and window-gated, with admin manual rebooking as the fallback for edge cases (expired link, price difference).

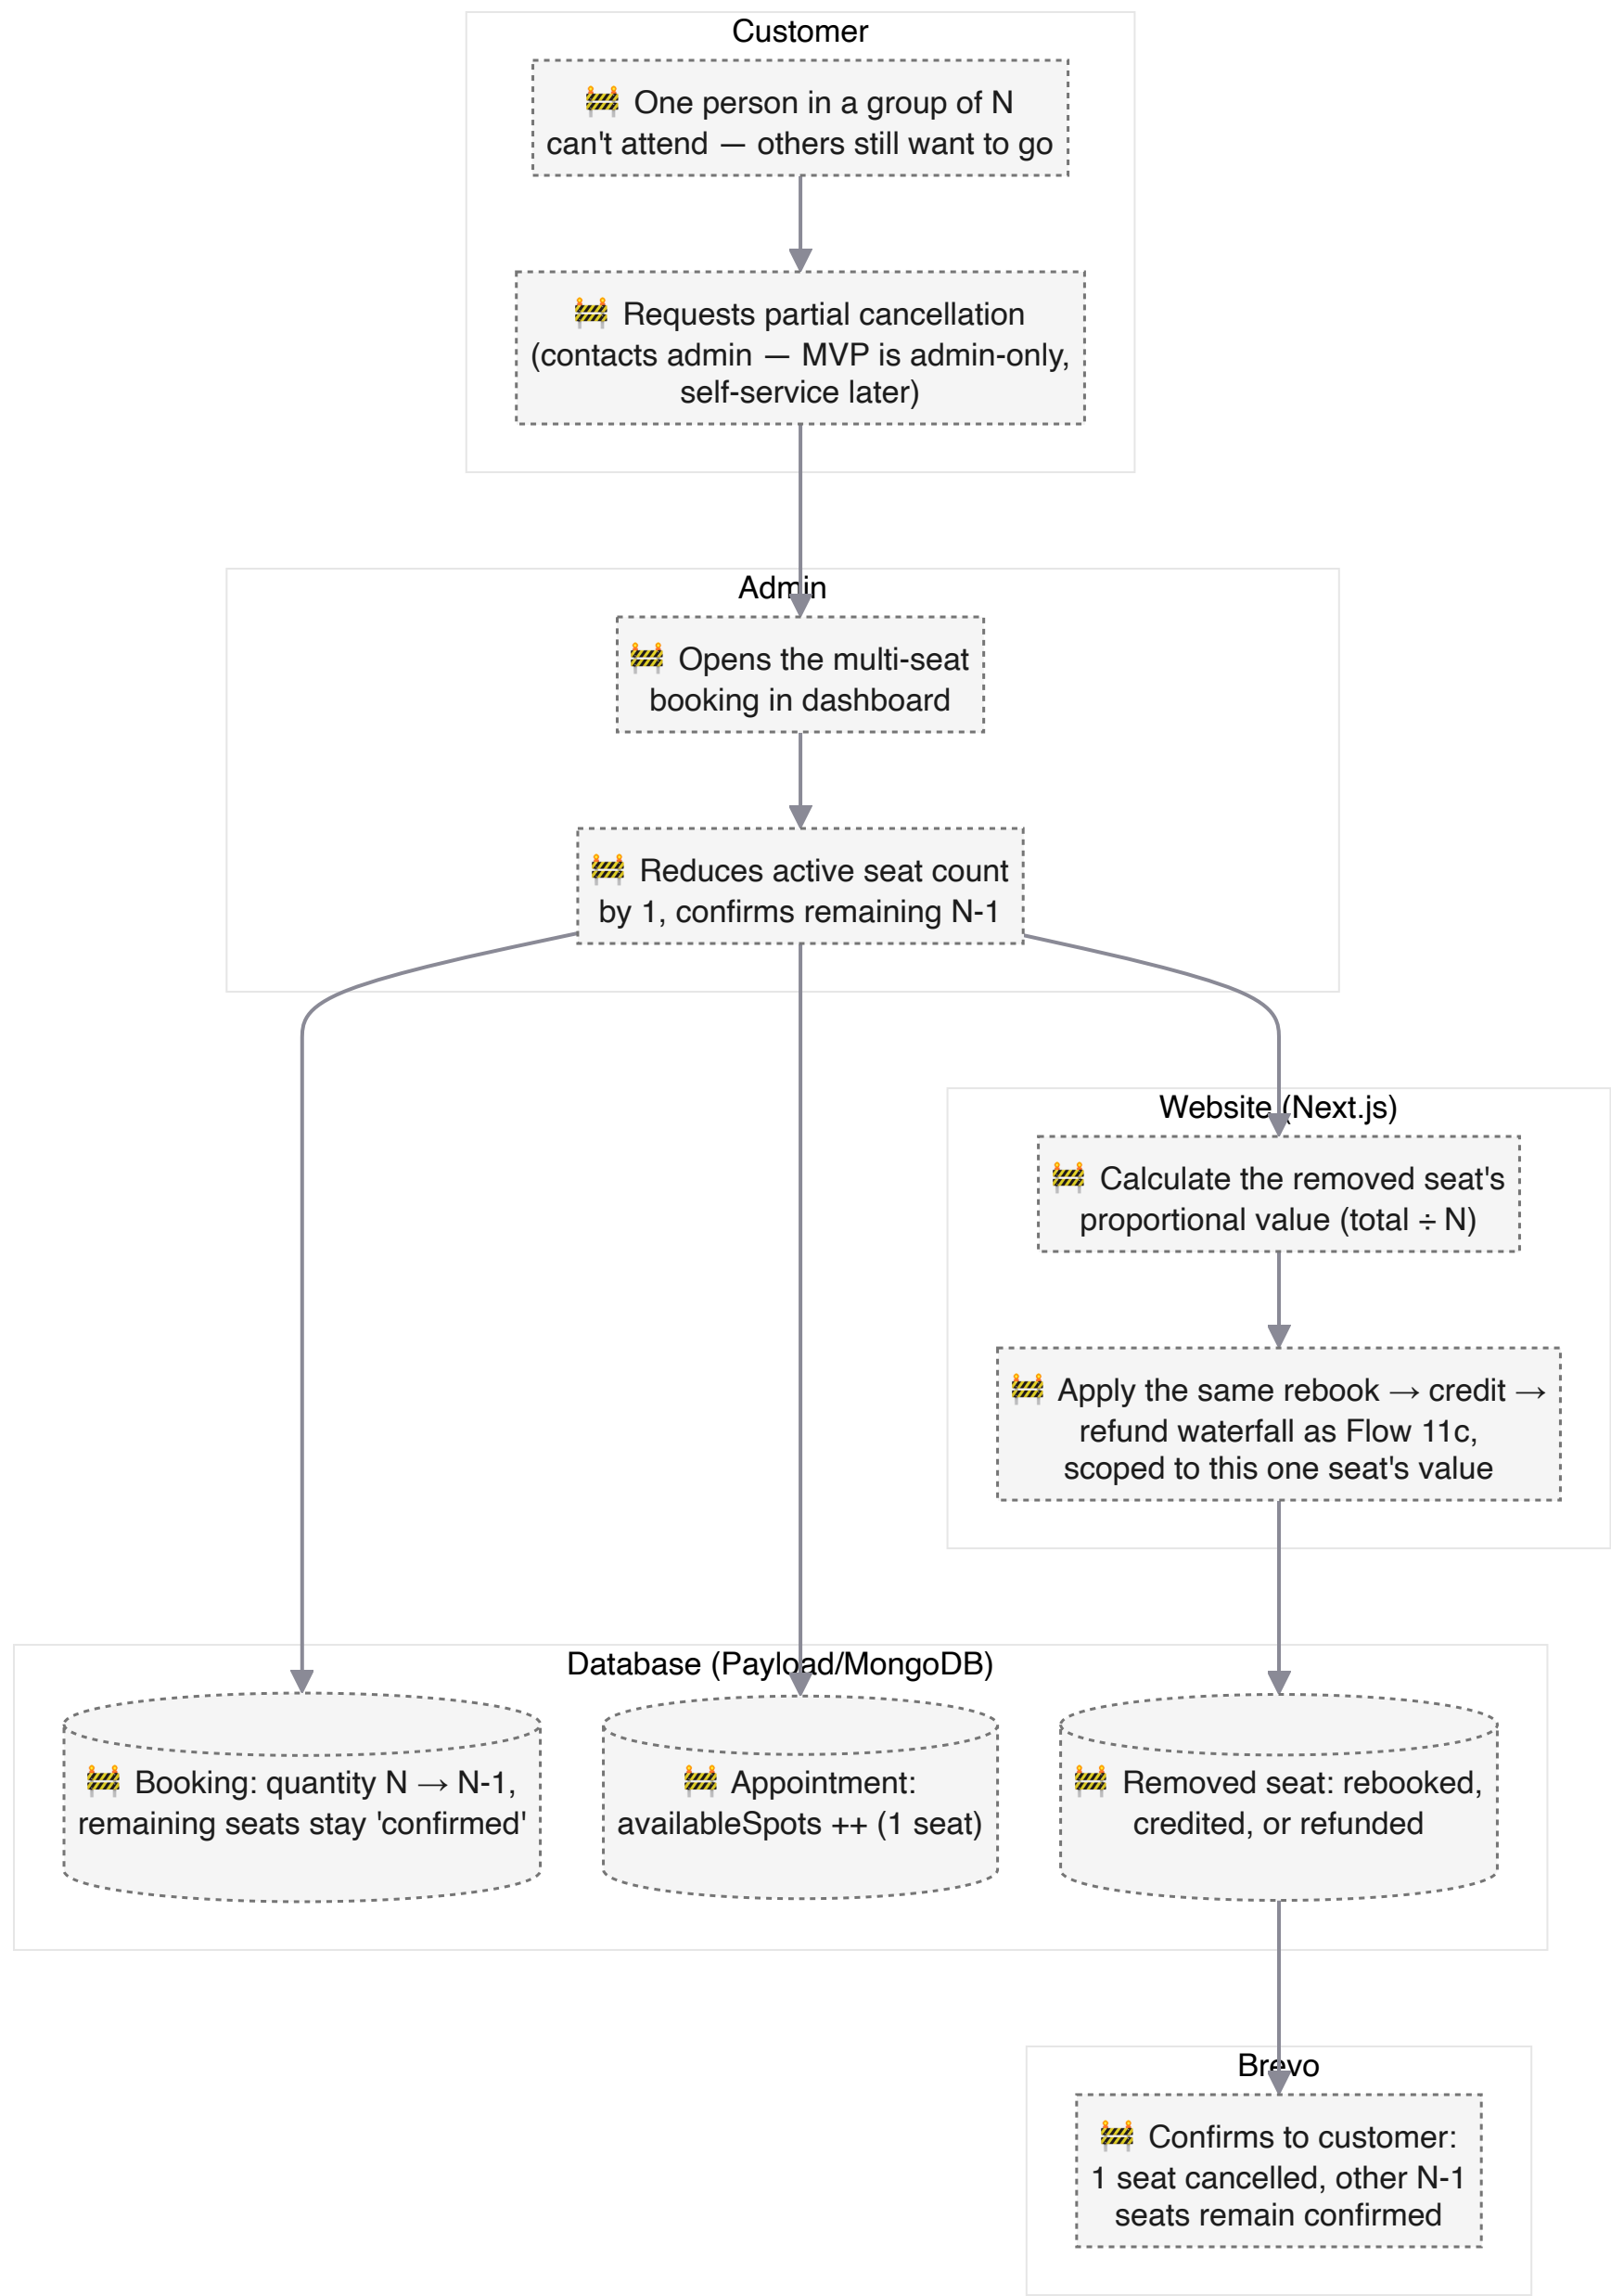

Flow 11c — Customer cancels entirely: rebook → credit → refund waterfall (David's Case 3)

The customer doesn't want any date — a true cancellation. Resolution depends on the same policy tiers proposed in the refund policy doc: 7+ days out offers credit first (refund only if the customer insists), 3–6 days offers credit only (refund becomes a rare, discretionary admin exception), under 72h/no-show gets neither.

Flow 11d — Partial cancellation of a multi-seat booking (David's Case 4)

Bookings hold 1–12 guests as a single quantity, not named individuals — so "one person out of a group of 3" reduces the quantity by one rather than cancelling the whole booking. MVP is admin-only (per David's suggested Option C); self-service can come later. The single removed seat's value follows the exact same rebook → credit → refund waterfall as Flow 11c, just scoped to one seat instead of the whole booking.

🚧 **Not built:** none of Flow 11a–11d exists today — the single biggest gap versus every flow above. These are the intended shapes, not current reality, and still need David & Marcel's sign-off on the underlying refund/credit policy before they're built as-is.

Map of maps — all 11 flows, overall health

Each flow shown as a single node, color-coded by overall status, with arrows showing hand-offs between flows. Color call for each flow is Rafaela Studio's synthesis of the detail above — worth a gut-check against your own read before sharing externally.
